

#### CIFA FOUNDATION LEVEL

# **QUANTITATIVE ANALYSIS**

WEDNESDAY: 24 April 2024. Morning Paper.

Time Allowed: 3 hours.

This paper has seven (7) questions. Answer any FIVE questions ALL questions carry equal marks. Show ALL your workings. Do NOT write anything on this paper.

# **QUESTION ONE**

State FIVE characteristics of binomial distribution. (a)

(5 marks)

(b) Isabella Koech, a businesswoman, is contemplating investing in one of two manufacturing companies namely; company A and company B. The data below shows the profits made by company A and company B over the past 150 days.

Daily profits	Number of days				
Sh."000"	Company A	Company B			
50 - 60	12	11			
60 - 70	26	14			
70 - 80	38	20			
80 - 90	36	23			
90 - 100	18	45			
100 - 110	11	23			
110 - 120	9	14			

#### Required:

Calculate the standard deviation for company A and company B. (i)

(6 marks)

(ii) Calculate the coefficient of variation for company A and company B. (2 marks)

- (iii) Advise Isabella Koech on the company to invest in based on the results obtained in (b) (i) and (b) (ii) above. (2 marks)
- Given the following sets: (c)

$$A = \{a, b, c, d\}$$

$$B = \{c, d, e, f, g\}$$

$$C = \{h, i, j, c, d\}$$

# Required:

Find:

(i) The universal set "U". (2 marks)

 $A \cap B \cap C$ . (2 marks) (ii)

c'. (iii) (1 mark)

#### **OUESTION TWO**

TOC Limited, an oil processing company purchased a machine that they intend to use in one of their production (a) processes. The machine is expected to have a useful life of 10 years after which it can be disposed for Sh.200,000. The net book value of the machine after 8 years is estimated to be Sh.560,000.

# Required:

The linear depreciation equation for the value of the machine. (i)

(4 marks)

(ii) Determine the value of the machine after 6 years. (2 marks)

(iii) Determine the number of years when the value of the machine will be Sh.1,460,000. (2 marks)

(b) A production manager is convinced that a new set of plant engineers will not affect the production level in the factory. To test this hypothesis, 15 samples of the first day output is taken and average production per day is measured as 14,500 units with a standard deviation of 102. Before the new plant engineers were engaged, the average output per day was 14,650 units.

# Required:

Test the manager's conviction at 5% level of significance

(8 marks)

Highlight FOUR considerations in determining whether to employ a census or a sample in collecting primary data. (c) (4 marks)

(Total: 20 marks)

#### **OUESTION THREE**

Clekex Cleaning Limited manufactures bar soaps for a hotel industry. The company specialises in three different (a) types of bar soaps weighing 0.5kg, 0.75kg and 1kg respectively. The three types of bar soaps are made by two machines, machine A and machine B. The number of hours required for each type of bar soap in each machine is shown below:

#### Type of bar soap Time taken for bar soap production (hours)

	Machine A	Machine .
0.5	0.40	0.25
0.75	0.60	0.12
1	0.50	0.60

Machine A has 2,800 hours available while machine B has 1,090 hours available. The management has decided that 1,000 bar soaps of 0.5kg must be produced.

# **Required:**

The number of 0.75kg bar soaps and 1kg bar soaps that will be produced assuming machine A and B hours are fully utilised. (6 marks)

(b) The following table shows the total cost per day on production of iron sheets for the last 10 days in a manufacturing company:

Day	Number of iron sheets produced	Total cost Sh."000"
1	31	35
2	29	33
3	35	35
4	29	36
5	38	40
6	28	34
7	32	35
8	34	37
9	26	32
10	25	25

#### Required:

(i) Determine the total cost function using the ordinary least squares method. (6 marks)

(ii) Determine the break-even number of iron sheets produced assuming that each iron sheet is sold at Sh.2,200 each. (3 marks)

(iii) The coefficient of determination of the data. (4 marks)

(iv) Interpret the result in (c) (iii) above. (1 mark)

(Total: 20 marks)

#### **QUESTION FOUR**

(a) Differentiate between the "multiplicative model" and "additive model" as used in time series. (4 marks)

(b) A research company has established that the occurrence of a contagious disease follows a Poisson distribution with a mean of 0.3 per week.

# Required:

The probability that no case of a contagious disease is reported. (i)

(3 marks)

(ii) The probability that almost one case of a contagious disease is reported. (3 marks)

A solar panel production firm intends to research on a launch of a new solar panel which would increase the sales (c) of the panels to between 2,000 units to 3,000 units per week. The weekly revenue in thousands of shillings over the range of sales could be represented by:

$$R = -3x^2 + 7x$$

Where x is the weekly solar panel units produced and sold in thousands. Past records of the solar panel production in the firm estimates its marginal costs in thousands of shillings could be represented by the function;

$$MC = 2x^2 - 3x + 5$$

The fixed costs will be Sh.1,000 per week.

Required:

The average cost function of the firm. (i)

(2 marks)

The average revenue function of the firm. (ii)

(1 mark)

The profit maximising output. (iii)

(5 marks)

(iv) The price that should be charged to maximise profits. (2 marks)

(Total: 20 marks)

#### **OUESTION FIVE**

A car hire company has provided the data below showing the number of cars hired out for the last 10 months (a) ending 31 March 2024:

Month	Number of cars
June 2023	110
July 2023	115
August 2023	109
September 2023	108
October 2023	106
November 2023	111
December 2023	107
January 2024	112
February 2024	114
March 2024	110

# Required:

- The forecast number of cars for the month of April 2024 using exponential smoothing method with a (i) smoothing constant  $\alpha = 0.3$ . (3 marks)
- (ii) The three months moving average forecasts for the month of April 2024.
- (iii) Using suitable computation, advise on the best forecast method. (6 marks)

(1 mark)

(b) World K Tours has Sh.6 million that may be used to purchase new rental minibuses for hire during the coming holidays. The minibuses may be purchased from two different manufacturers.

Important data concerning the minibuses is summarised below:

Minibus type	Manufacturer	Cost	Maximum seating	<b>Expected daily profit</b>
			capacity	per minibus (Sh.)
Weaverbird	Fastbus	80,000	11	10,000
Eaglet	Fastbus	90,000	14	12,000
Dovey	Smartbus	70,000	7	9,000
Crowlet	Smartbus	140,000	18	16,000

World K Tours wishes to purchase at least 80 minibuses and equal numbers from each of the manufacturer. World K Tours wishes to have a total sitting capacity of at least 500.

# Required:

Formulate the above linear programming problem, (i)

(6 marks)

Outline **FOUR** assumptions of the linear programming technique. (ii)

(4 marks)

(Total: 20 marks)

# **QUESTION SIX**

A manager must select 4 employees for a job promotion. 12 employees are eligible for job promotion. (a)

Determine the number of ways in which 4 employees could be chosen. (i)

(3 marks)

- Determine the number of ways in which the 4 employees could be chosen from the 12 employees in the (ii) department. (3 marks)
- A property developer has Sh.1,000,000 to invest in a new property. The developer has a choice of three different (b) properties going at the same price in different towns; one in Nairobi, another in Nakuru and the other in Nanyuki. With the three properties, his ultimate profit depends on whether the economy is strong, weak or mixed.

He estimates that the pay-off matrix representing his monthly profits in thousands of shillings is as follows:

		Sta	ates of nature	
		Weak	Mixed	Strong
	Nairobi	85	30	75
Strategies	Nakuru	45	45	110
Ö	Nanvuki	60	95	85

#### Required:

Determine the town that the developer should invest in using:

(i) Maxi-max criterion. (2 marks)

Maxi-min criterion. (2 marks) (ii)

(iii) Mini-max regret criterion. (4 marks)

(iv) Suppose the investor reads in the newspaper that there is 50% chance of a weak economy, 20% chance of a mixed economy and a 30% chance of a strong economy.

(2 marks) Advise on the best strategy, given the new information.

(v) Compute the expected value of perfect information. (4 marks)

#### **OUESTION SEVEN**

(a) A training institution requires that all its employees participate in one of three sports clubs namely; football, rugby or chess. In each term, the training institution designates an open selection period within which employees may change from one club to another.

Prior to the last open selection period, 10% of the employees preferred football, 35% preferred rugby and the remaining chess. During the open selection period, 25% of the employees taking football switched to rugby, while 15% switched to chess. 30% of the employees taking rugby switched to football and 10% switched to chess, 20% of the employees taking chess switched to football and 10% switched to rugby.

#### Required:

- (i) The transition matrix. (2 marks)
- (ii) The percentage of employees that will be taking each sport after the last open selection period. (4 marks)
- (iii) Assuming that the trend continues, determine the percentage of the employees who will be taking each sport in the long-run. (6 marks)
- (b) Agritech Consultants have engaged 3 farming trainees; Jim, Ken and Lorn. After six months, the Consultancy supervisor noted that 5%, 7% and 9% of land planted by Jim, Ken and Lorn respectively had ungerminated plants. The supervisor had distributed 40%, 25% and 35% of the land respectively.

# Required:

- (i) Present the above information in a tree diagram. (3 marks)
- (ii) The probability of land with ungerminated plants. (2 marks)
- (iii) The probability that land with ungerminated plants was planted by either Ken or Lorn. (3 marks)

  (Total: 20 marks)

#### CIFA FOUNDATION LEVEL

#### **QUANTITATIVE ANALYSIS**

WEDNESDAY: 6 December 2023. Morning Paper.

Time Allowed: 3 hours.

This paper has seven (7) questions. Answer any FIVE questions. ALL questions carry equal marks. Show ALL your workings. Do NOT write anything on this paper.

#### **QUESTION ONE**

(a) Highlight **FOUR** disadvantages of the mode as a measure of central tendency.

(4 marks)

- (b) Find the area between the curve  $y = x + 2x + \frac{1}{x^2}$ , the x axis and the lines x = 1 and x = 2. (4 marks)
- (c) Safi Limited manufactures and sells two types of cleaning pads; Osha and Oga. The demand functions for the two products are given by:

$$P_1 = 1,200 - 2x - 5y$$
  
 $P_2 = 1,700 - 3x - 2y$ 

Where P<sub>1</sub> is the unit price of Osha in shillings.

P<sub>2</sub> is the unit price of Oga in shillings.

x is the number of units sold of Osha.

y is the number of units sold of Oga.

The total cost of producing both products is given by the function TC = 230x + 90y.

#### Required:

(i) The number of units of each product required to maximise total profit.

(10 marks)

(ii) The maximum total profit.

(2 marks)

(Total: 20 marks)

#### **QUESTION TWO**

(a) List **SEVEN** steps of the decision making process.

(7 marks)

(b) The following data shows the quarterly sales of cars for Excellent Auto Enterprises for a period of three years:

	Sales (Sh."million")				
Year	Quarter 1	Quarter 2	Quarter 3	Quarter 4	
2020	25	20	18	30	
2021	33	28	26	38	
2022	41	37	34	46	

#### Required:

(i) The 4-quarter centred moving average trend values.

(4 marks)

(ii) The seasonal multiplicative indices.

(5 marks)

(iii) The deseasonalised sales for each quarter.

(4 marks)

#### **QUESTION THREE**

(a) Highlight **FOUR** applications of Markov chain analysis in business and finance.

(4 marks)

(b) An insurance company has 2 claim assessors who must each give approval to customers who wish to lodge a claim for compensation. The manager currently has 8 such customers and has asked each assessor to independently rank the customer claims in order of merit. The rankings are shown below:

Customer	A	В	C	D	E	F	G	Н
Assessor 1 Ranking	4	6	2	1	5	8	6	3
Assessor 2 Ranking	4	8	1	3	7	4	6	2

#### Required:

Calculate the rank correlation coefficient of the two sets of rankings and comment on the results.

(8 marks)

(c) The Revenue Authority Research Department conducted a survey that revealed the number of companies that were reported as being tax compliant in the last six months of the year 2022 as recorded in the table below:

Month	July	August	September	October	November	December
Number of Companies	326	290	306	260	355	365

#### Required:

Test the hypothesis that the number of tax compliant companies does not depend on the month of the year at a 1% significance level. (8 marks)

(Total: 20 marks)

# **QUESTION FOUR**

(a) An economy is based on 2 sectors; Agriculture and Manufacturing. Production of a shilling worth of Agriculture requires an input of 0.3 from the Agriculture sector and 0.1 from the Manufacturing sector.

Production of a shilling worth of manufacturing requires an input of 0.2 from the Agriculture sector and 0.4 from the Manufacturing sector.

#### Required:

Find the output from each sector that is needed to satisfy a final demand of Sh.12 billion for Agriculture and Sh.8 billion for Manufacturing. (8 marks)

- (b) Consider the following data for 120 students of a College concerning the languages they are studying namely; French, German and Russian.
  - 15 students study Russian and German.
  - 58 students study German or French but not Russian.
  - 28 students study French only.
  - 90 students study French or German.
  - 20 students study French and Russian.
  - 44 students study at least two of the three languages.
  - 20 students do not study any of the three languages.

# Required:

(i) Present the above information in a Venn diagram.

(6 marks)

(ii) Number of students who study all the three languages.

(2 marks)

(iii) Proportion of students who study French.

(2 marks)

(iv) Number of students who study at least one language.

(2 marks)

#### **QUESTION FIVE**

- (a) Explain the terms "minimax criterion" and "maximax criterion" as used in decision analysis. (4 marks)
- (b) Viwanda Ltd. produces light bulbs that are packed into boxes of 100. The company's quality control department indicates that 0.5% of the light bulbs produced are defective.

# Required:

(i) The percentage of boxes that will contain no defective light bulbs. (1 mark)

(ii) The percentage of boxes that will contain two or more defective light bulbs. (3 marks)

(c) An accountant wishes to undertake a cost analysis of the annual repair cost for a popular model of a machine as influenced by the age of the machine. The results obtained are shown below:

Age (years)	Repair cost (Sh."000")
1	70
3	140
5	230
8	350
7	300
12	570
8	350
4	200

#### Required:

- (i) Pearson's coefficient of correlation between the age of the machine and the repair cost. Interpret your result. (4 marks)
- (ii) Fit a least squares regression line of repair cost on age of machine to the data. (4 marks)
- (iii) Interpret the meaning of regression coefficients a and b in the least squares regression line obtained in (c) (ii) above. (2 marks)
- (iv) The coefficient of determination. Interpret your result. (2 marks)

(Total: 20 marks)

#### **OUESTION SIX**

(a) Explain **FOUR** limitations of quantitative analysis.

(4 marks)

(b) The amount of money spent on purchases by the first 50 customers at a large department store is summarised in the following table:

Amount spent (Sh."000")	Number of customers
0-5	3
5 - 10	6
10 - 15	7
15 - 20	11
20 - 25	15
25 - 30	8

#### Required:

Compute:

- (i) The mean amount spent by the 50 customers. (4 marks)
- (ii) The standard deviation of the amount spent by the 50 customers. (4 marks)
- (iii) The coefficient of variation of the amount spent by the 50 customers. (2 marks)
- (iv) The coefficient of Kurtosis and comment on your answer. (6 marks)

#### **OUESTION SEVEN**

(a)

Explain the following terms as used in statistics:

- - (i) Sample statistic. (2 marks)
  - (ii) Population parameter. (2 marks)
  - (iii) Sampling distribution. (2 marks)
- (b) A manufacturer of dresses makes two types of dresses; Standard and Executive. Each Standard dress requires 10 labour hours from the cutting department and 30 labour hours from the sewing department. Each Executive dress requires 20 labour hours from the cutting department and 40 labour hours from the sewing department. The maximum labour hours available in the cutting department and the sewing department are 320 and 540 respectively. The company makes a profit of Sh.500 on each Standard dress and Sh.800 on each Executive dress.

# Required:

- (i) Formulate a mathematical model for the above linear programming problem. (4 marks)
- (ii) Using the simplex method, determine the number of Standard and Executive dresses that should be produced in order to maximise profit. (10 marks)

  (Total: 20 marks)

#### CIFA FOUNDATION LEVEL

# **QUANTITATIVE ANALYSIS**

WEDNESDAY: 23 August 2023. Morning Paper.

Time Allowed: 3 hours.

Answer any FIVE questions. ALL questions carry equal marks. Show ALL your workings. Do NOT write anything on this paper.

#### **QUESTION ONE**

- (a) Explain the meaning of the following terms as used in decision theory:
  - (i) Decision alternative. (2 marks)
  - (ii) State of nature. (2 marks)
  - (iii) Conditional payoff. (2 marks)
  - (iv) Opportunity cost. (2 marks)
- (b) The following data relates to the ages of 100 students attending a workshop on personal branding organised by the student welfare officials of Pride Business College:

Age (in years)	Number of students
Below 20	2
20 - 25	41
25 - 30	10
30 - 35	20
35 - 40	32
40 - 45	18
45 - 50	10
Above 50	Δ

Thereafter, 15% of the youngest students and 5% of the oldest students attending the workshop were selected to attend a further training on curriculum vitae writing.

# Required:

- (i) Determine the youngest age of the students selected to attend the training on curriculum vitae writing.

  (4 marks)
- (ii) Determine the highest age of the students selected to attend the training on curriculum vitae writing.

  (4 marks)
- (iii) Calculate the median age of the students who remained after the selection of students to attend the training on curriculum vitae writing. (4 marks)

(Total: 20 marks)

#### **OUESTION TWO**

(a) State **FOUR** applications of mathematical functions in business.

(4 marks)

(b) Explain the following terms as used in set theory:

(i) Disjoint set. (2 marks)

(ii) Complement of a set. (2 marks)

(iii) Union of a set. (2 marks)

CA15 & CF15 Page 1

(c) The following regression equation was obtained for a class of 24 intermediate level students:

 $\hat{y} = 4.3 + 0.029X_1 + 0.029X_2 + 0.017X_3$ 

Standard error 0.0074 0.013 0.007

Where:

 $\hat{y}$  = Students score on a theory examination

 $X_1$  = Students rank (from the bottom) in high school

 $X_2$  = Students verbal aptitude score

 $X_3 = A$  measure of student character

# Required:

(i) Calculate the t ratio and the 95% confidence interval for the independent variables  $X_1$ ,  $X_2$  and  $X_3$ .

(6 marks)

- (ii) Determine the regressor which gives the strongest evidence of being statistically discernible. (2 marks)
- (iii) In writing up a final regression, explain whether one should keep the last regressor (X<sub>3</sub>) in the equation or drop it. (2 marks)

(Total: 20 marks)

#### **QUESTION THREE**

(a) State **FOUR** characteristics of the normal distribution.

(4 marks)

(b) A firm manufactures two models of bicycles; mountain bike and BMX. The firm earns profit of Sh.5,000 and Sh.6,000 on mountain bikes and BMX respectively. Both models are produced in three departments; assembly, fitting and painting. The time required per model produced and the time available per week (in hours) are given in the table below:

Departments	Required time Mountain bike	BMX	Available time
Assembly	2	3	180
Fitting	2	1	120
Painting	3	3	240

Required:

- (i) Formulate the above problem as a linear programming problem in order to maximise profits. (4 marks)
- (ii) Graphically show how the manufacturer should schedule his production to maximise profits. (8 marks)
- (iii) Compute and interpret the slack value for the painting department. (4 marks)

(Total: 20 marks)

#### **QUESTION FOUR**

(a) Explain the following terms as used in Markovian analysis:

(i) Transition matrix. (2 marks)

(ii) Equilibrium state. (2 marks)

(iii) Initial probability vector. (2 marks)

(b) The following pay-off matrix was developed by a company showing profits (in shillings) obtained from launching four different products P<sub>1</sub>, P<sub>2</sub>, P<sub>3</sub> and P<sub>4</sub> under four different states of nature:

		State of na	ture	
Product	$S_1$	$S_2$	$S_3$	<b>S</b> 4
$\mathbf{P}_1$	5,000	9,000	7,000	8,000
$P_2$	7,000	4,000	6,000	12,000
$P_3$	10,000	8,000	9,000	7,000
$P_4$	14,000	5,000	7,000	6,000

CA15 & CF15 Page 2
Out of 4

The 1	probabilities	for S <sub>1</sub> , S	2, S <sub>3</sub> and S	4 are given as	0.30, 0.40,	0.20 and 0	0.10 respectively.

-	•	
Ren	mr	7U •
ILLY	uire	٠u.

(i) Advise on the best course of action using the Mini-Max Regret Criterion.

(4 marks)

(ii) Advise on the best course of action using the Expected Opportunity Loss Criterion.

(4 marks)

(iii) An expert has offered to provide perfect information at a cost of Sh.2,500.

Advise the management of the company on whether or not to acquire the perfect information. (6 marks)

(Total: 20 marks)

#### **QUESTION FIVE**

(a) The output of an acre of land is assumed to be normally distributed with an average of 52 bags of maize and a standard deviation of 3.2 bags.

#### Required:

The probability that the output of an acre of land:

(i) Is greater than 48 bags.

(2 marks)

(ii) Is greater than 60 bags.

(2 marks)

(iii) Is less than 45 bags.

(2 marks)

(iv) Lies between 50 bags and 60 bags.

(2 marks)

(b) BMM Limited produces X number of items of product "Wonder" in a month at a cost described by the equation C = 5x + 4,000. The Management Accountant of the firm estimates that at a selling price of Sh.22 per unit, 18,000 units of "Wonder" could be sold. If the firm increases the unit price to Sh.30, only 10,000 units of "Wonder" can be sold.

#### Required:

- (i) Determine the number of units of product "Wonder" that BMM Limited should produce and sell in order to maximise profit. (6 marks)
- (ii) Determine the selling price per unit charged at the maximum profit.

(2 marks)

(iii) Calculate the break-even number of units.

(4 marks)

(Total: 20 marks)

# **QUESTION SIX**

(a) Distinguish between a "two-tailed test" and a "one tailed test" as used in inferential statistics.

(4 marks)

(b) The data below shows the sales made by Kuza Limited over a period of 6 years:

Year	2017	2018	2019	2020	2021	2022
Sales (in millions of shillings)	80	78	72	68	70	82

#### Required:

(i) The sales forecast for the year 2023 using exponential smoothing (use a smoothing constant of 0.2).

(4 marks)

(ii) The sales forecast for the year 2023 using the ordinary least squares method.

(6 marks)

(iii) Using suitable computations, advise Kuza Ltd. on the preferred forecast method.

(6 marks)

#### **QUESTION SEVEN**

(a) With the aid of diagrams, describe the **THREE** types of Kurtosis.

(6 marks)

(b) Consider the following hypothesis:

 $\begin{array}{ll} H_{\rm O} \ : & \mu = 400 \\ HI \ : & \mu \ngeq 400 \end{array}$ 

For a random sample of 12 observations, the sample mean was 407 and the sample standard deviation was 6.

# Required:

Using a significance level of 0.1, advise whether the null hypothesis should be accepted or rejected. (6 marks)

(c) A mobile phone manufacturer orders for a special component called PH-2 from four different suppliers; S<sub>1</sub>, S<sub>2</sub>, S<sub>3</sub> and S<sub>4</sub>. 20% of the components are purchased from S<sub>1</sub>, 10% from S<sub>2</sub>, 30% from S<sub>3</sub> and the remainder from S<sub>4</sub>.

From past experience, the manufacturer knows that 2% of the components from  $S_1$  are defective, 4% of the components from  $S_2$  are defective, 3% of the components from  $S_3$  are defective and 1% of the components from  $S_4$  are defective. All components are placed directly in the store before inspection. A worker selects a component for use and finds it defective.

# Required:

(i) The probability that the component was supplied by  $S_1$ .

(4 marks)

(ii) The probability that the component was supplied by  $S_2$  or S

(4 marks) (Total: 20 marks)

someaken Ja.

#### CIFA FOUNDATION LEVEL

#### **QUANTITATIVE ANALYSIS**

WEDNESDAY: 26 April 2023. Morning Paper.

Time Allowed: 3 hours.

Answer any FIVE questions. ALL questions carry equal marks. Show ALL your workings. Do NOT write anything on this paper.

# **QUESTION ONE**

(a) A survey was conducted to establish the number of faulty components from a production process. The results indicated that 0.01% of the components produced were faulty. Each machine produces 10,000 components.

#### Required:

The probability of there being 3 or more faulty components assuming a Poisson probability distribution. (4 marks)

(b) The Sales Manager of XYZ Ltd. estimates that the revenue function of the company is linear in nature. He has observed that at a selling price of Sh.200, the company sold 6,000 units. When the company increased the selling price per unit to Sh.700, the company sales decreased to 1,000 units.

The Cost Accountant of the company estimates that the cost function is quadratic in nature. The following data was provided:

Number of units (Q)	100	200	400
Total cost (Sh.) TC	79,000	76,000	124,000

#### Required:

(i) The revenue function.

(4 marks)

(ii) The total cost function.

(8 marks)

(iii) The profit maximising level of production.

(4 marks) (Total: 20 marks)

# **QUESTION TWO**

(a) A survey was recently conducted to determine the preferences of 360 customers with regard to three brands of cooking oil namely; sunflower oil, coconut oil and olive oil.

The following results were obtained:

220 customers preferred sunflower oil.

160 customers preferred coconut oil.

180 customers preferred olive oil.

80 customers preferred both sunflower oil and coconut oil.

110 customers preferred both sunflower oil and olive oil.

100 customers preferred both coconut oil and olive oil.

50 customers preferred none of the brands of cooking oil.

#### Required:

- (i) Present the above information in the form of a Venn diagram. (4 marks)
- (ii) Determine the probability that a customer picked at random prefers all the three brands of cooking oil. (2 marks)
- (iii) Determine the probability that a customer picked at random prefers at least two brands of cooking oil. (2 marks)
- (b) The time taken to complete a particular task was measured for 250 workers and the results were as shown below:

Time taken in minutes	Number of workers
0 - 5	2
5 - 10	2
10 - 15	3
15 - 20	5
20 - 25	5
25 - 30	18
30 - 40	$\mathbf{X}$
40 - 50	100
50 - 60	${f Y}$
Above 60	15

#### Required:

- (i) Determine the value of X given that the median time taken to complete the task is 40.5 minutes. (6 marks)
- (ii) Determine the value of Y given that the modal time taken to complete the task is 41.5 minutes. (6 marks)

(Total: 20 marks)

#### **OUESTION THREE**

Using the information given below, determine the level of output necessary from each sector to support a final demand of 500 units for sector X<sub>1</sub>, 1,600 units for sector X<sub>2</sub> and 2,000 units for sector X<sub>3</sub>:

Output	Inputs to				
	X <sub>1</sub>	X <sub>2</sub>	X <sub>3</sub>	Final demand (units)	
$X_1$	40	40	40	680	
$X_2$	40	80	80	1,400	
X <sub>3</sub>	400	1,200	280	2,120	

(12 marks)

(b) The monthly rent paid by residents of Hill View Estate is found to be normally distributed with a mean of Sh.22,150 and a standard deviation of Sh.8,900.

#### Required:

On the basis of a sample of 200 residents:

(i) Construct a 95% confidence interval for the monthly rent paid.

- (3 marks)
- (ii) Test the hypothesis that the amount paid in monthly rent is Sh.20,000 at a 5% significance level.

(5 marks)

(Total: 20 marks)

# **QUESTION FOUR**

- (a) Differentiate between the following terms:
  - (i) "Coefficient of skewness" and "coefficient of variation".

(4 marks)

(ii) "Arithmetic mean" and "harmonic mean".

(4 marks)

(b) Mr Rajab Omar is the Marketing Manager of Tintex Limited. He gathered data on the number of sales people engaged in a month and the sales made in the last ten months of the year 2022.

CA15 & CF15 Page 2 Out of 4 The results were as follows:

Year 2022	Number of sales people engaged	Sales
Month		Sh."000"
March	12	23
April	11	22
May	14	23
June	12	24
July	15	28
August	11	22
September	13	23
October	14	26
November	10	20
December	9	17

#### Required:

(i) Estimate the total sales function using the ordinary least squares method.

(10 marks)

(2 marks)

(ii) Predict the sales made in the month of January 2023 when 19 sales people were engaged.

(Total: 20 marks)

#### **OUESTION FIVE**

(a) Outline **FOUR** properties of a set.

(4 marks)

(b) A trader purchased 7 cartons of apples and 4 cartons of bananas at a total cost of Sh.32,500 in the month of January. In the month of February, he purchased 9 cartons of apples and 6 cartons of bananas at a total cost of Sh.43,500.

# Required:

Calculate the cost of a carton of apples and a carton of bananas using matrix algebra.

(6 marks)

(c) Red Rose Limited has developed a new washing detergent. The company is considering whether or not to market test the detergent prior to its launch. Market testing will cost \$h.50 million which may increase the likelihood of success of the product if it passes the test. The probability of passing the test is 0.8. If the product fails the test, it is regarded as worthless.

Previous data collected was as follows:

Probability of	No testing	Market testing
High success	0.20	0.40
Moderate success	0.35	0.40
Low success	0.45	0.20

Launching the product will cost Sh.150 million and the estimated profits are as follows:

High success Sh.900 million
Moderate success Sh.450 million
Low success Sh.225 million

Red Rose Limited has the option of selling the product design for Sh.250 million.

#### Required:

- (i) A decision tree showing the pay-off and the expected monetary value (EMV) of each decision. (8 marks)
- (ii) Advise the management of the company on the best course of action and the related expected monetary value (EMV). (2 marks)

(Total: 20 marks)

#### **QUESTION SIX**

- (a) In the context of time series analysis, distinguish between the following terms:
  - (i) "Mean absolute deviation" and "mean squared error".

(4 marks)

(ii) "Additive model" and "multiplicative model".

(4 marks)

CA15 & CF15 Page 3 Out of 4 (b) The quarterly profits of Nyota Limited during the years 2019, 2020, and 2021 were as tabulated below:

Year		Profits in Sh."million"				
2019	Quarter 1	Quarter 2	Quarter 3	Quarter 4		
2019	105	138	116	140		
2020	104	122	103	146		
2021	113	149	141	162		

Required:

(i) The three-quarter moving averages.

(4 marks)

(ii) The seasonal index for each quarter assuming the multiplicative model.

(4 marks)

(iii) Derive the deseasonalised profits using the multiplicative model.

(4 marks)

(Total: 20 marks)

**QUESTION SEVEN** 

- (a) Explain the meaning of the following terms in the context of probability theory:
  - (i) Mutually exclusive events.

(2 marks)

(ii) Independent events.

(2 marks)

(b) A linear programming problem has been formulated as below:

Objective function: Max Z

$$Z = 14x +$$

Subject to:

- 1.  $4x + 3y \le 240$
- 2.  $2x + y \le 100$
- 3.  $y \le 50$
- 4. x, y > 0

Required:

(i) Optimal production for x and wing the simplex method.

(12 marks)

(ii) The slack values for each constraint.

(2 marks)

(iii) The shadow price for each constraint.

(2 marks)

(Total: 20 marks)

••••••

# CIFA FOUNDATION LEVEL

#### **QUANTITATIVE ANALYSIS**

WEDNESDAY: 7 December 2022. Morning Paper.

Time Allowed: 3 hours.

Answer any FIVE questions. ALL questions carry equal marks. Show ALL your workings. Do NOT write anything on this paper.

# **QUESTION ONE**

State FOUR characteristics of a good measure of dispersion. (a)

(4 marks)

- Explain the meaning of the following terms as used in set theory: (b)
  - (i) Venn diagram.

(2 marks)

(ii) Complement of a set. (2 marks)

Union of a set. (iii)

(2 marks)

The management team of Stage Supermarket is interested in determining whether there is any relationship between (c) the distance from customers' residences to the supermarket and the number of visits made to the supermarket in a particular period.

Number of visits made

The following results were obtained:

Distance from customers'

Distance if our customers	1 (dillibet of visit
residences to the supermarket	
(in Kilometres)	
1	42
2	26
3	38
4	36
5	34
6	34
7	28
8	40
9	20
10	22

#### Required:

- (i) Determine whether there is any relationship between the number of visits made to the supermarket and the distance from customers' residences to the supermarket.
- (ii) Calculate the decrease in the number of visits to the supermarket with each unit increase in distance of customers' residences from the supermarket.

(2 marks)

(Total: 20 marks)

CA15 & CF15 Page 1

#### **QUESTION TWO**

(a) Shoetec Ltd., a manufacturer of stylish shoes, estimates that at full scale production, it would sell between 2,000 and 3,000 pairs of shoes.

The total monthly revenue in thousands of shillings over this range is represented by the function

$$TR = 3x^2 + 7x.$$

The firm estimates that the marginal cost (MC) in thousands of shillings could be represented by the function

$$MC = 5x^2 - 3x - 2$$
 and fixed cost (FC) will be Sh.1,000 per month.

Where x is the monthly output in thousands of pairs of shoes.

# Required:

(i) Derive the average cost and average revenue functions of the firm.

(4 marks)

(ii) Calculate the profit maximising output.

(4 marks)

(iii) Calculate the price charged upon maximising profit and how much each pair of shoes would cost.

(2 marks)

(b) An examination was administered to a group of students and the results were as summarised below:

Result	% of candidates
Passed with distinction	10%
Passed with credit	60%
Failed	30%

A candidate fails the examination if he/she obtains less than 40% in the examination. In order to pass with distinction, the candidate must obtain at least 75% in the examination.

#### **Required:**

Calculate the mean and standard deviation of the distribution of marks assuming that the marks scored are normally distributed. (10 marks)

(Total: 20 marks)

#### **OUESTION THREE**

- (a) Distinguish between the following terms as used in probability:
  - (i) "Conditional probability" and "marginal probability".

(4 marks)

(ii) "Discrete probability distributions" and "continuous probability distributions".

(4 marks)

(b) The banking industry in a given country is controlled by three banks Faida Bank, Akiba Bank and Ahadi Bank. As at 31 December 2020, Faida Bank controlled 30% of the market share, Akiba Bank controlled 50% of the market share and Ahadi Bank controlled 20% of the market share.

A survey was conducted on the market shares of the three banks as at 31 December 2021 and revealed the following:

- 1. Faida Bank had retained 80% of its market share and lost 15% and 5% to Akiba Bank and Ahadi Bank respectively.
- 2. Akiba Bank had lost 10% and 20% of its market share to Faida Bank and Ahadi Bank respectively.
- 3. Ahadi Bank had lost 5% of its market share to Faida Bank and 5% to Akiba Bank.
- 4. There were no significant changes in the banking habits of the customers during the year ended 31 December 2021.

**CA15 & CF15 Page 2 Out of 4** 

# Required:

- (i) Determine the transition matrix from the above information. (2 marks)
- (ii) Determine the market shares of the three banks as at 31 December 2021. (3 marks)

(iii) The steady state market shares of the three banks.

(7 marks)

(Total: 20 marks)

# **QUESTION FOUR**

(a) The Production Manager of Mechtex Ltd., a manufacturer of machines, is investigating a claim by customers about machine A and machine B that it manufactures.

The claim is that machine A has a longer useful life than machine B.

A sample of 60 machine As taken from the market reveals that the machine has a mean useful life of 28,000 hours with a standard deviation of 900 hours. A sample of 80 machine Bs has a mean useful life of 30,000 hours with a standard deviation of 1,000 hours.

# Required:

Advise the Production Manager of Mechtex Ltd. if there is a significant difference in the useful lives of the machines. (8 marks)

Use a significance level of 5%.

(b) The following data relate to the number of computers sold each day over the last 240 working days by a leading computer firm.

Number of computers sold	Number of da	y
10 - 15	12	
15 - 20	18	
20 – 25	35	
25 – 30	42	
30 – 35	50	
35 – 40	45	
40 - 45	30	
45 - 50	8	

# Required:

(i) The modal number of computers sold.

(2 marks)

(ii) The quartile deviation of the number of computers sold.

(6 marks)

(4 marks)

(iii) The quartile coefficient of skewness of the number of computers sold. Interpret your results.

(Total: 20 marks)

# **QUESTION FIVE**

(a) Highlight **FOUR** advantages of decision tree analysis as a tool for decision making.

(4 marks)

(b) State **FOUR** characteristics of the binominal distribution.

(4 marks)

(c) The management of a wall paint manufacturing company is faced with the problem of choosing one of three products to add to its existing product line. The potential demand for each product may turn out to be good, moderate or poor with probabilities estimated as 0.75, 0.15 and 0.10 respectively.

The estimated profit or loss under the three states of demand with respect to each product is outlined below:

	Type of demand		
Product	Good	Moderate	Poor
Silk	70,000	55,000	- 10,000
Matt	100,000	40,000	- 6,000
Gloss	120,000	50,000	- 40,000

#### CIFA FOUNDATION LEVEL

#### **QUANTITATIVE ANALYSIS**

WEDNESDAY: 3 August 2022. Morning paper.

Time Allowed: 3 hours.

Answer any FIVE questions. ALL questions carry equal marks. Show ALL your workings. Do NOT write anything on this paper.

#### **QUESTION ONE**

(a) Soundex Company has received an order to supply 900 tables, 1,200 desks and 2,000 chairs. The management of Soundex Company has decided that 500 tables, 800 desks and 1,300 chairs could be supplied from their city centre branch and the balance of the order could be filled from their industrial area branch.

Production of each table requires 3 hours in the machining department, 5 hours in the assembly department and 4 hours in the finishing department. Production of a desk requires 4 hours in the machining department, 8 hours in the assembly department and 6 hours in the finishing department. Production of a chair requires 2 hours in the machining department, 3 hours in the assembly department and 5 hours in the finishing department.

The cost of an hour in the machining assembly and finishing department is Sh.50, Sh.100 and Sh.150 respectively.

#### Required:

Using matrix algebra:

(i) Calculate the total number of hours required at each branch.

(6 marks)

- (ii) Calculate the total cost incurred at each branch and the total cost incurred by Soundex Company to supply the order. (4 marks)
- (b) The data below relates to the sales of Madi and Sons Electrical Company for the six months ending 30 June 2022:

Month	January	February	March	April	May	June
Sales (Sh."000")	80	76	78	82	72	82

#### Required:

Using exponential smoothing with a smoothing constant ( $\alpha$ ) of 0.25, determine the forecast sales for the month of July 2022. (4 marks)

(c) The number of employees working online during a particular week was recorded as shown below:

Day of the week	Number of employees
Monday	207
Tuesday	185
Wednesday	203
Thursday	180
Friday	_225
Total	1,000

#### Required:

Test the hypothesis that the number of employees who worked online does not depend on the day of week. Use a significance level of 1%. (6 marks)

(Total: 20 marks)

CA15 & CF15 Page 1 Out of 5

#### **OUESTION TWO**

(a) TMA Company produces three products; Standard, Deluxe and Luxury in three of its departments which are Cutting, Assembly and Finishing. The total available labour hours per week for Cutting, Assembly and Finishing departments are 180, 300 and 240 respectively.

To produce two units of Standard requires 240 minutes in the Cutting department, half the amount of time in the Assembly department and same amount of time in the Finishing department as in the Cutting department.

To produce one unit of Deluxe requires 60 minutes, 180 minutes and 60 minutes in Cutting, Assembly and Finishing departments respectively.

To produce three units of Luxury requires 180 minutes in Cutting department and twice the amount of time in both Assembly and Finishing departments.

The contribution per unit from Standard, Deluxe and Luxury is Sh.6, Sh.5 and Sh.2 per unit respectively.

# Required:

(i) Formulate the above problem as a linear programming model.

(6 marks)

(ii) Prepare an initial simplex tableau to solve the above model.

(4 marks)

(b) The above problem was solved using a statistical software and the final simplex tableau is provided below:

	Mo	del varia	bles	Sla	ck variab	les (C	
Basis	$X_1$	$X_2$	$X_3$	$S_1$	$S_2$	<b>S</b> 3	R.H.S
$X_1$	1	0	1/5	3/5	-1/5	• 0	48
$X_2$	0	1	3/5	$-\frac{1}{5}$	2A	0	84
$S_3$	0	0	1	-1	$^{\circ}$ $^{\circ}$ $^{\circ}$ $^{\circ}$	1	60
Z	0	0	1/5	13/5	4/5	0	708

# Required:

(i) Explain whether the solution is optimal. Justify your answer.

(2 marks)

(ii) Determine the optimal solution for TMA Company.

(2 marks)

- (iii) Determine the slack or surplus value for each constraint. State which one is a slack and which one is a surplus. (4 marks)
- (iv) Determine the shadow price for each constraint.

(2 marks) (Total: 20 marks)

# **QUESTION THREE**

(a) (i) Explain the term "Markov analysis".

(2 marks)

(ii) Highlight four assumptions of Markov analysis.

(4 marks)

- (b) Differentiate between the following sets of terms as used in hypothesis testing:
  - (i) "Null hypothesis" and "alternative hypothesis".

(2 marks)

(ii) "Parameter" and "statistic".

(2 marks)

(c) The following payoff matrix shows the potential profits in millions of shillings which are expected to arise from launching four products  $S_1$ ,  $S_2$ ,  $S_3$  and  $S_4$  for each level of demand; low, moderate or high.

Payoff matrix

	Demand			
Product	Low	Moderate	High	
$S_1$	15	22	29	
$S_2$	22	24	28	
$S_3$	32	23	34	
$S_4$	35	22	33	

# Required:

Assuming that the products are mutually exclusive, evaluate the optimal decision using:

(i) Maximax criterion. (3 marks)

(ii) Maximin criterion. (3 marks)

(iii) Minimax regret criterion. (4 marks)

(Total: 20 marks)

#### **QUESTION FOUR**

(a) A proposal to teach longer hours on weekdays rather than have weekend classes was put forward by a subject lecturer to his students.

The following results were obtained:

	Opinion		
Students gender	In favour	Opposed	Undecided
Male	40	10	15
Female	20	30	20

# Required:

Calculate the probability that a student selected at random will be:

(i) Female and in favour of the proposal. (2 marks)

(ii) Either male or opposed to the proposal. (2 marks)

(iii) Undecided given that the student is female. (2 marks)

(b) The Production Manager of AMIK Company has provided the following information relating to the number of units produced per day in the last 172 days:

Production per day (units)	Frequency in days
230 - 260	12
260 - 290	18
290 - 320	25
320 - 350	52
350 - 380	35
380 - 410	15
410 - 440	9
440 - 470	6

# Required:

(i) The modal production. (2 marks)

(ii) The median production. (2 marks)

(iii) The quartile deviation of the production. (6 marks)

(c) A curve is defined by the quadratic function

$$y = x^2 - 15x + 54$$

# Required:

(i) Determine the roots of the equation using the factorisation method. (2 marks)

(ii) By using differentiation, determine the coordinates of the turning point of the curve. (2 marks) (Total: 20 marks)

#### **QUESTION FIVE**

(a) ABC Ltd. has introduced a new product branded "Nilan". The Production Manager wishes to establish the relationship between the total cost of production and the number of units produced. The Production Manager also believes that the relationship between the total cost of producing "Nilan" and the number of units produced is linear in nature.

The Production Manager has gathered the following data on the production for the last 8 months:

Month	Units produced "000"	Total cost of production Sh."000"
December 2021	675	6,900
January 2022	630	6,480
February 2022	825	6,990
March 2022	645	7,200
April 2022	900	8,560
May 2022	600	6,720
June 2022	510	6,300
July 2022	550	5,250

#### Required:

(i) Estimate the total cost function using the ordinary least squares method. (7 marks)

(ii) The coefficient of determination between the number of units produced and the total cost of production.

(2 marks)

(iii) Interpret your answer in (a) (ii) above.

(1 mark)

- (b) A survey of 850 residents of a certain town aimed at finding out the brand of vehicles owned, produced the following results:
  - 316 residents owned Nissan vehicles
  - 160 residents owned Honda vehicles.
  - 360 residents owned Toyota vehicles.
  - 120 residents owned both Nissan and Toyota vehicles.
  - 56 residents owned both Nissan and Honda vehicles.
  - 80 residents owned both Honda and Toyota vehicles.
  - 240 residents did not own any of the three brands of vehicles.

#### Required:

(i) Present the above information in the form of a Venn diagram.

(5 marks)

(ii) The number of residents who own all the three brands of vehicles.

(3 marks)

(iii) The number of residents who own just one of the three brands of vehicles.

(2 marks)

(Total: 20 marks)

# **QUESTION SIX**

(a) Outline four qualities of a good average.

(4 marks)

(b) The weights of 1,000 items are normally distributed with a mean weight of 200 kgs and a standard deviation of 22 kgs.

#### Required:

(i) Determine the number of items that have weights between 210 kgs and 220 kgs.

(2 marks)

(ii) Determine the number of items that have weights between 180 kgs and 230 kgs.

(2 marks)

(iii) Calculate the weight below which 20% of the items fall.

(2 marks)

(c) The data below shows the probability distribution of profits earned by firms in the manufacturing industry:

Profit Sh."million"	Probability
10 - 20	0.05
20 - 30	0.05
30 - 40	0.10
40 - 50	0.15
50 - 60	0.30
60 - 70	0.10
70 - 80	0.20
80 - 90	0.05

# Required:

- (i) The expected profit. (4 marks)
- (ii) The expected standard deviation. (4 marks)
- (iii) The coefficient of variation. (2 marks)

# (Total: 20 marks)

#### **QUESTION SEVEN**

(a) A technician at Light Industries Ltd. has established that the probability of a production process producing defective output is 0.2. A total of 60 units are produced from the process in a certain production period.

# Required:

- (i) The probability that exactly 10 of the units will be defective assuming a poisson distribution. (3 marks)
- (ii) The probability that exactly 10 of the units well be defective assuming a binomial distribution. (2 marks)
- (iii) The expected number and standard distribution.

  The expected number and standard distribution of units expected to be defective assuming a binomial distribution. (2 marks)
- (b) XYZ Ltd. produces and sells a product branded "Xedo". The product is produced in two departments; manufacturing and assembly.

The marginal revenue (MR) of XYX Ltd. is given by the function

$$MR = 600 - 0.12q$$

Where q is the number of units produced and sold.

The total variable cost (VC) for the two departments is given as follows:

# Manufacturing department

$$VC = 60q + 0.06q^2$$

# **Assembly department**

$$VC = 12q + 0.03q^2$$

The total fixed cost for each of the departments is as follows:

	Sh.
Manufacturing department	40,000
Assembly department	120,000

#### Required:

- (i) The total revenue, total cost and profit functions of XYZ Ltd. (6 marks)
- (ii) The profit maximising level of output. (2 marks)
- (iii) The maximum profit of XYZ Ltd. (1 mark)

(c) Given that A = 
$$\begin{pmatrix} 2 & -1 & 2 \\ 1 & 0 & 3 \\ 3 & -2 & -5 \end{pmatrix}$$
 and B =  $\begin{pmatrix} 3 & -6 & -3 \end{pmatrix}$ 

$$B = \begin{pmatrix} 3 & -6 & -3 \\ 7 & -14 & -7 \\ -1 & 2 & 1 \end{pmatrix}$$

Show that  $AB \neq 0$  (4 marks)

#### CIFA FOUNDATION LEVEL

# QUANTITATIVE ANALYSIS

WEDNESDAY: 6 April 2022. Morning paper.

Time Allowed: 3 hours.

(4 marks)

Answer any FIVE questions. ALL questions carry equal marks. Show ALL your workings. Do NOT write anything on this paper.

#### **OUESTION ONE**

(a) Hexadol Limited has been in operation for the last 5 years. The Company's annual revenue function and annual cost function take the form of quadratic functions.

The following data was obtained from the records of the company for the last 3 years:

	Year C			
	2019	2020	2021	
Units produced and sold: "million"	4	8	12	
Revenue Sh."million"	2,3201	4,480	6,480	
Cost Sh."million"	10,404	9,832	9,272	

Required:

(i) The revenue function of the company.

(ii) The cost function of the company. (4 marks)

(b) Explain the following terms as used in probability:

(i) Joint probability. (2 marks)

(ii) Mutually exclusive events. (2 marks)

(iii) Conditional probability. (2 marks)

(iv) Dependent events. (2 marks)

(c) A firm has 500 employees out of whom, 2% have a minor accident in a given year. Out of the employees who have a minor accident in a given year, 30% had safety instructions. 80% of all employees had no safety instructions.

#### Required:

The probability of an employee being accident free given that the employee had no safety instructions. (4 marks)

(Total: 20 marks)

# **QUESTION TWO**

- (a) Explain three types of Kurtosis that a graphical representation of a frequency distribution can assume. (6 marks)
- (b) The following data shows the age distribution of 350 employees of a multi-national company.

Age (years)	Number of employees
20 - 25	20
25 - 30	70
30 – 35	100
35 – 40	65
40 - 45	40
45 - 50	25
50 - 55	15
55 - 60	10
60 - 65	5

CA15 & CF15 Page 1 Out of 4

#### Required:

Compute the following measures and give an interpretation of each:

(i) The mean age. (2 marks)
 (ii) The median age. (3 marks)
 (iii) The standard deviation of the employees' ages. (6 marks)
 (iv) The Karl Pearson's coefficient of skewness. (3 marks)
 (Total: 20 marks)

#### **QUESTION THREE**

(a) A random sample of 350 invoices issued by ARIK Ltd. revealed an average invoice value of Sh.38,780 with a standard deviation of Sh.8,750.

#### Required:

- (i) The interval within which the population mean should fall at 95% level of confidence. (3 marks)
- (ii) The sample size of invoices that would result in a 99% confidence level of the interval obtained in (a) (i) above. (3 marks)
- (b) The following information relates to the operating life of two brands of mobile phones, brand A and brand B:

	Brand A	√Brand B
Mean life (days)	1,730	1,684
Standard deviation (in days)	102 🎺	108
Sample size	200	200
	76	

# Required:

Advise a potential customer on whether there is any significant difference between the quality of the two brands of mobile phones at a 5% level of significance. (6 marks)

(c) A certain new strategy K was claimed to be effective for teams playing a certain game.

In a marathon of 400 games, half of the teams used strategy K and the other half used strategy P.

The teams' performance was recorded in the following table

	Won	Defeated	Drawn
Adopted strategy K	130	20	60
Adopted strategy P	110	30	50

# Required:

On the basis of the above data and using the chi-square method, advise whether there is a significant difference in the effect of the two strategies, K and P. (8 marks)

(Total: 20 marks)

#### **OUESTION FOUR**

(a) XYZ Ltd. produces three products namely A, B and C. The company presents the profit per unit of the products it produces and sells as follows:

Sh.2,000, Sh.3,000 and Sh.4,000 for products A, B and C respectively during the month of January 2022. Sh.7,000, Sh.9,000 and Sh.4,000 for products A, B and C respectively during the month of February 2022. Sh.1,000, Sh.4,000 and Sh.2,000 for products A, B and C respectively during the month of March 2022. The total profits in the months of January, February and March 2022 are Sh.17 million, Sh.45 million and Sh.16 million respectively.

#### Required:

The total number of each product produced and sold using matrix algebra.

(8 marks)

CA15 & CF15 Page 2 Out of 4 (b) The savings accounts in a certain microfinance bank have an average balance of Sh.240,000 and a standard deviation of Sh.60,000. The account balances are assumed to be normally distributed.

#### Required:

- (i) The proportion of savings accounts whose balances are above Sh.275,000. (3 marks)
- (ii) The proportion of savings accounts whose balances lies between Sh.190,000 and Sh.260,000. (3 marks)
- The average revenue function of a certain company is given by the function AR = 2,000 24q. The cost function (c) is given by the function  $C = 6q^2 + 1,440q + 1,280$ . In both cases, q represents the quantity in units.

The profit function of the company. (i)

(3 marks)

(ii) The maximum profit for the company. (3 marks)

(Total: 20 marks)

#### **QUESTION FIVE**

Ahadi Ltd. is in the process of analysing its electricity expense and its relationship with the machine hours of operation.

The following data is provided with respect to the year ended 31 December 2021:

Month	Number of machine hours	Electricity expense
	"000"	Sh."000" 🔷
January	72	1,020
February	55	820
March	39	7 <b>20</b> 0
April	60	<b>9</b> 00
May	49	870 720 825 1,365 870 890
June	39	<i>⊘</i> 720
July	53	825
August	81	9 1,365
September	63	<b>§</b> 870
October	59	890
November	45	790
December	50	940

#### Required:

(a) The least squares regression line for the above data and interpret its meaning. (10 marks)

Estimate the amount of electricity expense assuming the expected machine hours are 78,000. **(b)** 

(2 marks)

- (c) The product moment correlation coefficient between machine hours and electricity expense. Interpret your answer. (6 marks)
- (d) The standard error of estimate for the regression line. Interpret your answer.

(2 marks) (Total: 20 marks)

# **QUESTION SIX**

Highlight four requirements that must be met before the linear programming model can be applied. (i) (a)

(4 marks)

(ii) A company makes two products; 1 and 2.

Each product requires time on two machines A and B. The specifications for each product are as follows:

Product 1	Product 2
1.6	1.0
2.5	1.0
22	48
14	37
30	50
	2.5 22 14

Maximum time available for machine A is 80 hours and for machine B is 100 hours.

CA15 & CF15 Page 3 Out of 4

#### Required:

Formulate a linear programming model to determine the number of product 1 and product 2 which should be produced and sold in order to maximise total contribution for the company using the graphical method.

(12 marks)

(b) State any four assumptions of the Poisson probability distribution.

(4 marks)

(Total: 20 marks)

# QUESTION SEVEN

(a) The table below shows the quarterly profits of Kahawa Limited (in millions of shillings) for the years 2019, 2020 and 2021:

	Quarterly profits (Sh."million")						
Year	Quarter 1 Quarter 2 Quarter 3 Quarter 4						
2019	23	32	27	21			
2020	27	35	32	24			
2021	31	43	40	29			

# Required:

(i) The three-quarter moving average of the profits.

(6 marks)

(ii) The quarterly seasonal variations of the profits using the additive model.

(4 marks)

- (iii) Forecast the adjusted profits for the year 2022 given that the actual profits (in Sh. "million") in the year 2022 are 35, 50, 47 and 33 for Quarter 1, Quarter 2, Quarter 3 and Quarter 4 respectively. (4 marks)
- (b) An investment manager in an investment fund has a choice between:
  - 1. A diversified portfolio promising 1.5 million with a probability of 0.7 and Sh.8 million with a probability of 0.3.
  - 2. A risky investment consisting of two contracts with independent outcomes one promising Sh.7 million with a probability of 0.7 and the other Sh.3.5 million with a probability of 0.3.

#### Required:

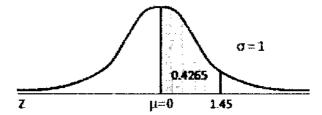

(i) Construct a decision tree depicting the above information using the expected monetary value (EMV) criterion. (3 marks)

(ii)	Advise on the best decision using the EMV criterion.	(3 marks)
·		(Total: 20 marks)

# CIFA FOUNDATION LEVEL

# QUANTITATIVE ANALYSIS

FRIDAY: 17 December 2021. Time Allowed: 3 hours.

Answer any FIVE questions. ALL questions carry equal marks. Show ALL your workings.

# **QUESTION ONE**

(a) Explain the following terms as used in time series analysis:

(i)	Cyclical variations.	(2 marks)
(ii)	Random variations.	(2 marks)
(iii)	Seasonal variations.	(2 marks)
(iv)	Trend.	(2 marks)

(b) The following data relates to the profits reported by XYZ Ltd. in each of the months in the year 2020:

Month	Profit (Sh."million")
January	40
February	38
March	39
April	41
May	36
June	41
July	34
August	37
September	35
October	37
November	40
December	41

# Required:

(i) Estimate the trend line using the ordinary least squares method.

(9 marks)

(ii) Estimate the profit reported in March of the year 2021.

(3 marks) (Total: 20 marks)

# QUESTION TWO

(a) State five advantages of the arithmetic mean as a measure of central tendency.

(5 marks)

(b) The following data shows the distribution of profits of 150 manufacturing companies in a given year:

CA15 & CF15 Page 1 Out of 4

Profit ("Sh."million")	Number of companies
10-20	15
20-30	13
30-40	25
40-50	30
50-60	16
60-70	10
70-80	22
80-90	12
90-100	7

# Required:

(i) The arithmetic mean of the profits and interpret the results. (4 marks)

(ii) The standard deviation of the profits and interpret the results. (8 marks)

(iii) The coefficient of variation of the profits and interpret the results. (3 marks)

(Total: 20 marks)

#### **QUESTION THREE**

(a) Explain the following terms as used in Markov analysis:

(i) Markov process. (2 marks)

(ii) Equilibrium state. (2 marks)

(iii) Absorbing state. (2 marks)

(iv) Closed state. (2 marks)

(b) The marketing department of Jacuzi Ltd. estimates the daily demand function of one of its products to be linear in nature. If the price was fixed at Sh.570, the daily demand would be 400 units. If the price was increased to Sh.820, the daily sales would drop to 200 units.

The production department has indicated that the marginal cost of producing Q units of the product is given by the following equation: MC = 2Q - 570

Where: MC is the marginal cost and Q is the number of units produced.

The daily fixed cost is Sh.1,100.

# Required:

(i) The revenue function of Jacuzi Ltd. (4 marks)

(ii) The total cost function of Jacuzi Ltd. (3 marks)

(iii) The maximum profit that Jacuzi Ltd. could make. (5 marks)

(Total: 20 marks)

# **QUESTION FOUR**

(a) In the context of hypothesis testing, distinguish between a "type I error" and a "type II error". (4 marks)

(b) The sales before and after a promotional campaign in ten different regions for a certain commodity were recorded as follows:

CA15 & CF15 Page 2 Out of 4

Region	Sales before promotional campaign "Sh.million"	Sales after promotional campaign "Sh.million"
1	53	58
2	28	29
3	31	30
4	48	50
5	50	50
6	42	45
7	63	59
8	40	36
9	25	22
10	30	28

#### Required:

Using a 5% level of significance, determine whether the promotional campaign was a success or not. (16 marks)

(Total: 20 marks)

#### **QUESTION FIVE**

Bantu Limited makes two types of pudding: vanilla and chocolate. Each serving of vanilla pudding requires 2 teaspoons of sugar and 25 fluid measures of water, and each serving of chocolate pudding requires 3 teaspoons of sugar and 15 fluid measures of water. Bantu Limited has available each day 3,600 teaspoons of sugar and 22,500 fluid measures of water. Bantu Limited makes no more than 600 servings of vanilla pudding because that is all that it can sell each day. Bantu Limited makes a profit of Sh.10 on each serving of vanilla pudding and Sh.7 on each serving of chocolate pudding.

#### Required:

(a) Formulate a linear programming model to solve the above problem.

(4 marks)

(b) Construct an initial simplex tableau.

(4 marks)

Using the simplex method, determine how many servings of each type of pudding Bantu Limited should make in order to maximise profit. (12 marks)

(Total: 20 marks)

#### **OUESTION SIX**

(a) State four applications of matrices in business.

(4 marks)

(b) A global conference on "the blue economy" was recently held in Kenya and was attended by 280 delegates from America, Europe and Africa.

The following information relates to the delegates who attended the conference:

- 70 delegates represented Europe
- 96 delegates represented Africa
- 128 delegates represented America
- delegates represented all the three continents.
- 25 delegates represented America and Africa
- 22 delegates represented America and Europe
- 26 delegates represented Europe and Africa

# Required:

(i) Present the above information in the form of a Venn diagram.

(4 marks)

(ii) The number of delegates who represented at least two continents.

(2 marks)

(iii) The number of delegates who represented only one continent.

(2 marks)

(iv) The number of delegates who represented none of the three continents.

(2 marks)

CA15 & CF15 Page 3 Out of 4

During the manufacture of a product, 0.002 of the product turns out to be defective. The product is supplied in (c) packets of 10. A consignment of 100,000 packets is produced in a certain period.

# Required:

Using the Poisson distribution, calculate the approximate number of packets containing:

No defectives. (i) (2 marks)

1 defective. (ii) (2 marks)

(2 marks) (iii) 2 defectives.

(Total: 20 marks)

# **QUESTION SEVEN**

A random sample of 15 employees of a call centre was taken and each employee took a competency test. The (a) mean of the scores achieved by these employees was 56.3% with a standard deviation of 7.1%. The results of this test have been found to be normally distributed in the past.

# Required:

Construct a 95% confidence interval for the mean of the test score of the call centre employees. (6 marks)

- (b) (i) Distinguish between the "coefficient of correlation" and the "coefficient of determination". (4 marks)
  - (ii) The following data was obtained during a social survey conducted in a given urban area regarding the monthly income of households and their corresponding expenditure:

Household	Monthly income Sh."000"	Monthly expenditure Sh."000"
Α	150	120
В	130	135
С	200	195
D	245	190
E	140	120
F	100	85
G	80	65
H	145	130
I	130	60
J	90	75

# Required:

The Pearson's coefficient of correlation between monthly income and monthly expenditure and interpret the result. (10 marks)

# t Table

### CIFA FOUNDATION LEVEL

#### PILOT PAPER

### **QUANTITATIVE ANALYSIS**

December 2021. Time Allowed: 3 hours.

Answer any FIVE questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

### **QUESTION ONE**

(a) Mashariki Enterprises started business in January 2018 selling photo copiers in the City. The following information relates to sales and enquiries made during the year ended 31 December 2020.

Sales calls (x)	Copiers sold (y)
96	41
40	41
104	51
128	60
164	61
76	29
72	39
88	50
36	28
84	43
180	70
132	56

#### **Required:**

Derive the regression equation of y on x.

(12 marks)

(b) Explain four characteristics of Karl Pearson coefficient of correlation.

(8 marks)

(Total: 20 marks)

### **OUESTION TWO**

An electronics dealer in Nakuru has labelled a certain electrical component with numbers 1-50. These components are normally sold to 5 specific customers who pick one each on week days only. Incidentally, the components labelled numbers 3, 18, 12, 26 and 46 are defective.

### Required:

- (a) The probability that one customer will have drawn five defective components by the end of 5 weeks. (15 marks)
- (b) The probability that two customers will have drawn two defective components each, two none and the other components, in two weeks. (5 marks)

(Total: 20 marks)

**CA15 & CF15 Page 1 Out of 3** 

### **QUESTION THREE**

(a) Explain the difference between the following terms:

(i) Type 1 and Type II errors. (4 marks)

(ii) One-tail test and two-tail test. (4 marks)

(iii) Normal distribution and t-distribution. (4 marks)

(b) The manufacturer of the TyroX radical truck tyre claims that the mean mileage the tyre can be driven before the thread wears out is 60,000 km, assuming the mileage wear follows the normal distribution and a standard deviation of 5,000 km. In a sample of 48 tyres, the mileage was found to be 59,500 km.

### Required:

Test whether this observation is different from the claim by the manufacturer at 5% significance level. (8 marks)

(Total: 20 marks)

### **QUESTION FOUR**

Agro manufacturers produce three products; Chat, Item and Wit (in thousands) whose demand and cost functions are given as follows:

Chat: AR = 16 - 3Q; ATC = 4Q + 8Item:  $P = 10 - Q - 2Q^2$ ; ATC = Q + 4Wit:  $P = 100 - \frac{1}{2}Q$ ;  $ATC = 300 + 2Q - 2Q^2$ 

### Required:

- (a) Output and price levels that will maximize profits. (9 marks)
- (b) Maximum profit for each product. (9 marks)
- (c) Total profit for the production of the three products at the optimal point. (2 marks)

  (Total: 20 marks)

#### **OUESTION FIVE**

The frequency distribution of after tax earnings for Applewood Ltd. for 180 months to 31 December 2020 was as follows:

Profit after tax Sh."000" (X)	Frequency (f)
$20,000 \le x < 60,000$	8
$60,000 \le x < 100,000$	11
$100,000 \le x < 140,000$	23
$140,000 \le x < 180,000$	38
$180,000 \le x < 220,000$	45
$220,000 \le x < 260,000$	32
$260,000 \le x < 300,000$	19
$300,000 \le x < 340,000$	4

### Required:

(a) Modify the formula given below for median to derive another one for:

(i) 25<sup>th</sup> percentile of the distribution. (6 marks)

(ii) 75<sup>th</sup> percentile of the distribution. (6 marks)

(Ensure to indicate what each of the symbols used stand for)

(b) Evaluate:

(i)  $2^{\text{nd}}$  decile of the distribution. (4 marks)

(ii) 8<sup>th</sup> decile of the distribution. (4 marks)

CA15 & CF15 Page 2 Out of 3

$$L = \left(\frac{\underline{n} - C}{2}\right) \dot{\epsilon}$$

Where: L = Lower class boundary of the median class

n = Sample size

C = Cumulative frequency of the class below the median class

f = Frequency of the median class

*i* + Class interval.

(Total: 20 marks)

### **QUESTION SIX**

- (a) Write short notes on the following formulas in relation to time series analysis:
  - (i)  $Y = T \times C \times S \times I$  (4 marks)
  - (ii)  $Y_T = b_0 + b_I x$  4 marks)
  - (iii) In  $Y_T = In bo + In b_I$  (4 marks)
  - $\begin{array}{ll} \text{(iv)} & b_I = & \frac{\sum xy n\, \overline{X}\overline{Y}}{\sum x^2 n\overline{X}^2} \end{array} \tag{4 marks}$
- (b) Explain the process of exponential smoothing. (4 marks)

(Total: 20 marks)

(Total: 20 marks)

### **QUESTION SEVEN**

In the context of linear programming, explain each of the following:

- (a) Constrained optimisation. (4 marks)
- (b) Inequality constraints. (4 marks)
- (c) Objective function. (4 marks)
- (d) Constrained minimisation. (4 marks)
- (e) Non-negativity constraints. (4 marks)

.....

#### **CIFA PART II SECTION 4**

#### **CCP PART II SECTION 4**

### **QUANTITATIVE ANALYSIS**

FRIDAY: 3 September 2021.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

#### QUESTION ONE

(a) The Aviation Perspectives Agency (APA) recently conducted a market survey to determine the air travel preferences of 170 travellers in a certain country. The air travel preferences were represented by the following airlines; Excellent Airways, Safari Connections and Tumaini Services.

The following results were obtained from the survey:

100 travellers preferred Excellent Airways.

40 travellers preferred Safari Connections.

75 travellers preferred Tumaini Services.

20 travellers preferred Excellent Airways and Safari Connections.

28 travellers preferred Excellent Airways and Tumaini Services.

18 travellers preferred Safari Connections and Tumaini Services.

9 travellers did not record any preference.

### Required:

(i) Represent the above information in a Venn diagram.

(4 marks)

(ii) Determine the number of travellers who preferred all the three airlines.

(3 marks)

- (iii) The number of travellers who preferred the Safari Connections and Tumaini Services, but not the Excellent Airways.
- (b) The following data presents the quarterly imports of electrical products by a certain electronics company for the given four-year period:

Year	Imports in Sh."Million"							
l cui	Quarter 1	Quarter 2	Quarter 3	Quarter 4				
2017	43	71	83	59				
2018	50	82	93	75				
2019	62	89	101	81				
2020	73	95	120	89				

#### Required:

(i) Using 4-quarter moving averages, calculate the seasonal variations from the above data.

(8 marks)

(ii) Derive the deseasonalised data for the imports using the additive model.

(4 marks)

(Total: 20 marks)

CA43, CF43 & CP 43 Page 1 Out of 4

#### **QUESTION TWO**

(a) Explain any four assumptions underlying the game theory.

(4 marks)

(b) Zakem Ltd. produces two products namely; "Alkon" and "Zenon". The products pass through three departments namely; Assembly, Finishing and Packaging. There is a maximum of 200 hours in each of the Assembly and Finishing departments.

In addition, a maximum of 400 hours of packaging are available for packing "Alkon" and "Zenon".

The table below shows the number of hours required per unit of each product:

Department	Hours required per unit of product				
Department	"Alkon"	"Zenon"			
Assembly	2	3			
Finishing	4	2			
Packaging	5	3			

Each unit of "Alkon" and "Zenon" gives a profit contribution of Sh.3,000 and Sh.2,000 respectively.

### Required:

(i) Formulate a linear programming model to solve the above problem.

(2 marks)

(14 marks)

(ii) Using the simplex method, solve the linear programming model formulated in (b) (i) above.

(Total: 20 marks)

### **OUESTION THREE**

(a) The demand function for a certain product is given by:

$$P = 0.3Q - 5$$

Where:

P is the price in shillings of the product per unit; and Q is the quantity of the product demanded in units.

The total cost (TC) of the firm (Sh. "million") is given by TC =  $1.7Q^2 - 18Q + 15$ .

#### Required:

(i) The break-even point quantity (in units).

(2 marks)

(ii) The level of output (in units) that maximises profit.

(4 marks)

(b) (i) Explain the difference between "point estimate" and "confidence interval".

(4 marks)

(ii) Mali Supermarkets (MMS) operates two branches, one in Kisumu and the other in Mombasa. The management has received complaints that there is a significant difference between the wages paid to employees in the two branches.

A sample of 40 employees was taken from the Kisumu branch and it had a mean wage of Sh.12,000 and a standard deviation of Sh.1,000. A sample of 50 employees taken from the Mombasa branch had a mean wage of Sh.13,000 and a standard deviation of Sh.1,200.

#### Required:

Advise the management of MMS on whether there is a significant difference between the wages paid in Kisumu branch and Mombasa branch.

(Use a significance level of 5%).

(10 marks)

(Total: 20 marks)

CA43, CF43 & CP 43 Page 2 Out of 4

#### **QUESTION FOUR**

- (a) Explain the difference between "correlation coefficient" and "coefficient of determination" as used in regression analysis. (4 marks)
- (b) A group of eight students were tested in "Quantitative Analysis" and "Auditing" examinations. The marks scored were as follows:

	Marks in percentage (%)					
Student	Quantitative Analysis	Auditing				
Α	76	82				
В	43	57				
C	49	75				
D	84	86				
Е	69	68				
F	69	92				
G	53	43				
Н	36	53				

### Required:

Compute the Spearman's rank correlation coefficient and interpret the results.

(8 marks)

(c) A medium-sized company manufactures product "Ndovu". The current variable production cost per unit of product "Ndovu" is Sh.800 while the selling price is Sh.1,150 per unit. However, the demand for product "Ndovu" is uncertain and has the following probability distribution:

Number of units of product "Ndovu"	Probability demanded
10	0.36
20	0.42
30	0.22

### Required:

Advise the company on the optimal number of units of product "Ndovu" to produce using the:

(i) Expected monetary value (EMV) criterion.

(4 marks)

(ii) Hurwicz criterion. Assume a coefficient of optimism of 0.8.

(4 marks) (Total: 20 marks)

### **OUESTION FIVE**

(a) Summarise four practical limitations of the "queuing model".

(4 marks)

(b) A recent inspection of bolts produced by a certain company revealed that 16 bolts were defective out of a total of 40 bolts inspected.

5 bolts are picked at random and inspected.

#### Required:

- (i) Assuming that the distribution of defective bolts follows the poisson distribution, calculate the probability that at least three bolts are defective. (4 marks)
- (ii) Assuming that the distribution of defective bolts follows the binomial distribution, calculate the probability that at most 3 bolts are defective. (4 marks)

CA43, CF43 & CP 43 Page 3 Out of 4

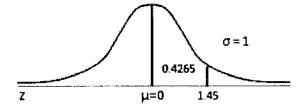

ABC Limited is a construction company. An engineer identified the following activities to complete a project and their estimated expected time in weeks. (c)

Activity	Preceding Activity	Expected estimated time (in weeks)
Α	•	5
В	•	7
C	-	3
D	Α	7
E	Α	6
F	В	8
G	C	10
H	E, F	3
I	E, F	4
J	D, I	2
K	G, H, J	4
L	D, I	7

vedan	eu:	
(i)	Draw a network diagram to represent the above project.	(6 marks)
(ii)	Obtain the critical path and project duration.	(2 marks) (Total: 20 marks)

# Areas Under the One-Tailed Standard Normal Curve

This table provides the area between the mean and some Z score. For example, when Z score = 1.45 the area = 0.4265.

Z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	80.0	0.09
0.0	0.0000	0.0040	0.0080	0.0120	0.0160	0.0199	0.0239	0.0279	0.0319	0.0359

#### **CIFA PART II SECTION 4**

#### **CCP PART II SECTION 4**

#### QUANTITATIVE ANALYSIS

FRIDAY: 21 May 2021.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

#### **QUESTION ONE**

(a) Differentiate between "correlation analysis" and "regression analysis".

(2 marks)

(b) Compu World Limited assembles and sells computers. The company estimates that if it optimally assembles computers, it could sell between 1,100 and 2,000 computers per month and the monthly revenue (in thousands of shillings) over this range of sales could be represented by the function  $R = 1,000x - 200x^2$ .

Where: R is the monthly revenue.

x is the number of computers sold per month (in thousands).

The company estimates that its marginal cost (in thousands of shillings) could be represented by the following function:

 $MC = 200x^2 - 200x + 400$ 

Where: MC is the marginal cost

x is the number of computers assembled.

The fixed cost of the company amounts to Sh.100,000 per month. It is assumed that all the computers assembled in a given month are sold within the same month.

### Required:

The total cost function.

(2 marks)

(ii) The profit function.

(2 marks)

(iii) The optimal monthly output.

(3 marks)

(iv) The maximum profit of the company.

(2 marks)

(c) The Registrar of Highfliers University has observed that the grade point aggregate of the University's students is normally distributed with a mean of 2.75 and a standard deviation of 0.40.

### Required:

- (i) The probability that a randomly selected student from the university has a grade point aggregate of between 2.00 and 3.00. (3 marks)
- (ii) The lowest grade point aggregate that should be obtained by a student for him/her to be among the top ten per cent of the students. (3 marks)
- (iii) Assuming that the university has a total of 10,000 students, determine the number of students having a grade point aggregate of 3.70 or higher. (3 marks)

(Total: 20 marks)

CA43, CF43 & CP43 Page 1 Out of 5

### QUESTION TWO

- (a) Highlight two properties of each of the following probability distributions:
  - (i) Binomial distribution.

(2 marks)

(ii) Poisson distribution.

(2 marks)

(b) Enumerate two advantages and two disadvantages of the ordinary least squares method of forecasting.

(4 marks)

(c) An investor intends to purchase shares in one of three companies, A, B and C. The three companies have varying degrees of sensitivity to the state of the economy. There are three states of the economy classified as weak, moderate or strong. The investor has constructed the following pay off table for the profits under the three states of the economy, in millions of shillings.

	State of the economy				
Company	Weak	Moderate	Strong		
Α	-4.0	3.5	6.0		
В	-2.0	2.5	4.5		
C	-2.4	2.8	3.5		

The probabilities for the three states of the economy are 0.2, 0.4 and 0.4 for weak, moderate and strong respectively.

### Required:

Advise the investor on the best course of action based on the:

(i)	Maxmin criterion.	(2 marks)
(ii)	Maxmax criterion.	(2 marks)
(iii)	Minimax regret criterion.	(3 marks)
(iv)	Expected value of perfect information.	(5 marks)

(Total: 20 marks)

#### **QUESTION THREE**

(a) A baker makes and sells cakes to students through their cafeteria system. The distribution of cakes produced and cakes sold for the last 250 weeks is as follows:

Normalisan of annualisa

	Number of weeks		
	Cakes	Cakes	
Number of cakes	Produced	Sold	
150	20	35	
250	50	50	
350	80	80	
450	80	65	
500	20	20	

Each cake costs Sh.80 to make and is sold for Sh.120 if sold during the week of production, otherwise it is sold during the second week at Sh.60. If not sold during the second week, the cake's value drops to zero and the baker suffers the total loss of production. Weekly demand is satisfied from the week's production and any demand remaining unsatisfied is satisfied from the stock of the previous week. A stock out costs the baker Sh.20 per cake.

The following random numbers are applicable:

Cakes produced	33,	86,	50,	41,	31,	78,	30,	22,	26,	88
Cakes sold	79,	03,	40,	13,	58,	61,	72,	49,	82,	86

### Required:

Simulate the baker's average weekly profit over an 8-week period.

(10 marks)

(b) Kazi na Bidii Ltd. sells four types of products. The resources needed to produce one unit of each product and the sales prices are given as follows:

Cost and resources requirements for Kazi na Bidii Ltd.

Resource	Product 1	Product 2	Product 3	Product 4
Raw materials (units)	2	3	4	7
Labour hours	3	4	5	6
Sales price (Sh.)	4	6	7	Ŕ

### Additional information:

- 1. Currently, 4,600 utilts of raw materials and 5,000 labour hours are available.
- To meet customers' demand, exactly 950 total units must be produced and at least 400 units of Product 4 must be produced.
- 3. A computer output of the above linear programming model has been given as follows:

MAX

$$4x_1 + 6.5x_2 + 7x_3 + 8x_4$$

### SUBJECT TO:

- $2) \quad x_1 + x_2 + x_3 + x_4 = 950$
- 3)  $x_4 > = 400$
- 4)  $2x_1 + 3x_2 + 4x_3 + 7x_4 < = 4600$
- 5)  $3x_1 + 4x_2 + 5x_3 + 6x_4 \le 5000$

### **END**

LP OPTIMUM FOUND AT STEP 4

# OBJECTIVE FUNCTION VALUE

1) 6650.0000

VARIABLE	VALUE	REDUCED COST
$X_1$	.000000	1.000000
$X_2$	400.000000	.000000
$X_3$	150.000000	.000000
$X_4$	400.000000	.000000
ROW	SLACK OR SURPLUS	DUAL PRICES
2)	0.000000	3.000000
3)	0.000000	-2.000000
4)	0.000000	1.000000
5)	250.000000	.000000
NO ITERATIONS	4	

## **RANGES IN WHICH BASIS IS UNCHANGED**

		OBJECTIVE COEFFICIENT RANG				
VARIABLE	CURRENT COEFF	ALLOWABLE INCREASE	ALLOWABLE DECREASE			
X <sub>1</sub>	4.000000	1.000000	Infinity			
X <sub>2</sub>	6.000000	0.66667	.500000			
$X_3$	7.000000	1.000000	.500000			
X4 .	8.000000	2.000000	Infinity			

### RIGHT-HAND SIDE RANGES

ROW	CURRENT RHS	ALLOWABLE INCREASE	ALLOWABLE DECREASE
2)	950.000000	50.000000	100.000000
3)	400.000000	37.000000	125.000000
4)	4600.000000	250.000000	150.000000
5)	5000.000000	Infinity	250.000000

Required:

(i) The optimal solution to the problem.

(2 marks)

(ii) The optimal solution if the company raises the price of product 2 by Sh.0.50 per unit.

(2 marks)

(iii) The optimal Z-value if a total of 980 units must be produced.

(3 marks)

(iv) The optimal Z-values where 4,500 units and 4,400 units of raw materials are available.

(3 marks)

(Total: 20 marks)

**QUESTION FOUR** 

(a) Enumerate eight applications of quantitative analysis in business.

(8 marks)

(b) The following is a pay-off matrix of a zero sum two person game:

Player B	strategy
----------	----------

			•			
		1	H	111	IV	V
	ŀ	-2	0	0	5	3
Player A strategy	П	4	2	1	3	2
	111	-4	– 3	0	-2	6
	IV	5	3,0	- 4	2	-6

Required:

The optimal plan for both players.

(5 marks)

(c) A beauty therapist has observed that the mean arrival rate in her beauty parlour is 6 customers per hour and the mean service rate is 8 customers per hour. The beauty parlour operates a 12 hour day.

A more efficient machine for use by the therapist is available for purchase. If the machine is purchased by the therapist, it would increase the average service rate at the parlour to 12 customers per hour. The cost of each hour lost due to a customer waiting for service is Sh.875.

## Required:

(i) The average waiting cost per day.

(3 marks)

(ii) Evaluate the effect of purchasing the more efficient machine on the average daily waiting cost.

(4 marks)

(Total: 20 marks)

### **QUESTION FIVE**

(a) Citing an example in each case, explain the difference between a continuous function and a discrete function.

(4 marks)

(b) X Ltd. is considering undertaking a project which fequires the following resources:

Activity	Preceding	Dura	tion in days	Total cost	Number of
	activity	Normal	Crash time	normal Sh.	persons per day
Α	-	7	5	7,500	5
В		6	3	6,000	4
C	-	2	2	2,500	6
D	Α	5	4	6,000	5
E	В	5	4	7,000	. 5
F	£	6	2	8,000	6
G	Е	7	6	6,000	4
Н	С	6	5	7,200	6
ı	H	8	5 .	9,800	9
J	D	4	4	3,500	3
K	j	6	5	3,600	2
L	F	3	2	7,000	12
M ·	G, I	8	4	9,200	6
N	K, L, M	• 4	2	7,700	15

The cost of crashing an activity per day is Sh.1,000.

Using	network analysis, determine:	
(i)	The project's normal duration, normal cost and critical path.	(8 marks)
(ii)	The minimum time in which the project could be completed and the cost of the project.	(8 marks) <b>Total: 20 marks)</b>

#### **CIFA PART II SECTION 4**

### **CCP PART II SECTION 4**

### QUANTITATIVE ANALYSIS

MONDAY: 30 November 2020.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

### **QUESTION ONE**

A potential investor in the production of a new type of organic fertilizer estimated the demand function of the product to be AR = 150 - Q.

Where:

AR is the average revenue in thousands of shillings. Q is the output in tonnes.

The investor estimated the variable cost (VC) per unit tonne associated with the production to be:

VC/tonne = Q - 285 in thousands of stillings.

The firm's cost when not producing any output is estimated at Sh.8,750,000.

Required:

(i) The profit function. (2 marks)

(ii) The level of output that maximises profit. (2 marks)

(iii) The breakeven output. (2 marks)

A game between two players, A and B has the following pay off matrix: (b)

		Player A strategies				
		$A_1$	$\mathbf{A}_2$	<b>A</b> <sub>3</sub>	<b>A</b> <sub>4</sub>	A <sub>5</sub>
Player B Strategies	B <sub>1</sub>	0	-4	1	2	4
	B <sub>2</sub>	-4	5	-1	1	9
	$B_3$	13	5	3	11	9
	B <sub>4</sub>	-2	8	-7	-1	-2
Required:						

The optimum strategy for each player. (i)

(4 marks)

(ii) The saddle point. (1 mark)

(iii) The value of the game.

(1 mark)

An accounting college has two classes, day class and evening class. From a survey conducted by the head of (c) academics in the college, the following results were obtained:

	Classes		
	Day	Evening	
Number of students	13	15	
Average test mark (%)	45	55	
Standard deviation (%)	4	5	

CA43, CF43 & CP43 Page 1 Out of 4

### Required:

Determine whether there is any significant difference in the average test mark between the two classes at 5% level of significance.

(8 marks)

(Total: 20 marks)

### **QUESTION TWO**

(a) A baker must decide whether to bake brown bread or white bread for a new market. Demand at the market can either be small or large with probability estimated to be 0.3 and 0.7 for brown bread and white bread respectively.

#### Additional information:

- 1. If brown bread is baked and demand proves to be high, the baker may choose not to expand (pay off = Sh.350,000) or to expand (pay off = Sh.420,000).
- 2. If brown bread is baked and demand is low, there is no reason to expand and the payoff is Sh.310,000.
- 3. If white bread is baked and demand proves to be low, the choice is to do nothing (Sh.90,000) or to stimulate demand through local advertising. The response to advertising may be either modest or sizeable, with their probabilities estimated to be 0.4 and 0.6 respectively. If it is modest, the pay off is estimated to be Sh.50,000; the pay off grows to Sh.340,000 if the response is sizeable.
- 4. If white bread is baked and the demand turns out to be high, the payoff is Sh.1,400,000.

### Required:

- (i) A decision tree showing the payoff and expected monetary value of each alternative decision. (6 marks)
- (ii) Advise the management of the bakery on the best product to introduce into the market. (2 marks)
- (b) In a choral music competition, 9 contestants were awarded marks in percentage using a music scoring grid by two assessors. The results obtained were given as shown in the table below:

	⊘' Marks in % by:				
Contestant	1st Assessor	2 <sup>nd</sup> Assessor			
A	72 60	76			
В	82 .	80			
C		78			
D	√2 70 ·	73			
E	67	70			
F	81	85			
G	78	69			
H	* 75	83			
I	65	68			

### Required:

(i) The rank correlation coefficient. Interpret your results. (4 marks)

(ii) Coefficient of determination. (1 mark)

(c) In a certain hospital, the arrival rate of patients into the outpatient department is 3 patients per hour and 4 patients are normally attended per hour.

### Required:

(i) Service rate. (1 mark)

(ii) Length of queue. (1 mark)

(iii) Length of the system. (1 mark)

(iv) The time a patient takes being actually attended. (2 marks)

(v) The probability that there are more than six patients in the outpatient hospital department. (2 marks)
(Total: 20 marks)

CA43, CF43 & CP43 Page 2 Out of 4

#### **OUESTION THREE**

(a) Dolce Ltd. is in the process of launching a new product into the market. Three variables are uncertain; selling price, variable cost and sales volume.

The following information is provided:

Selling price (Sh)	Probability
600	0.30
700	0.50
800	0.20
Variable cost (Sh.)	Probability
300	0.40
400	0.50
500	0.10
Sales volume (units)	Probability
40,000	0.30
50,000	0.50
60,000	0.20

The following random numbers have been provided:

44, 84, 82, 50, 85, 40, 96, 88, 16, 16, 97, 92, 44, 82, 39, 33, 83, 42, 16, 07, 77, 66, 50, 20, 50, 95, 83, 39, 58, 44, 77, 11, 08, 38, 89, 45, 09, 99, 81, 97, 50, 83.

### Required:

The average contribution of Dolce Ltd. using Monte Carlo simulation with 10 simulations.

(10 marks)

(b) The production manager of Sweet Ltd. is concerned with the fluctuating indirect labour cost in relation to the labour hours worked by the employees.

The following data was collected for the past 12 months.

Month	Labour hours "	Indirect labour cost Sh."000"
January	48	963
February	68	752
March	94 -	1,032
April	82	1,316
May	46	710
June	78	1,180
July	96	1,456
August	60	770
September	72	1,004
October	62	1,211
November	88	917
December	68	1,190

### Required:

Using the ordinary least squares method:

(i) Formulate the indirect cost function.

(5 marks)

(ii) Compute the indirect labour cost for 120 labour hours.

(2 marks)

(iii) Calculate the coefficient of determination.

(3 marks)

(Total: 20 marks)

### **OUESTION FOUR**

- (a) Explain the following terms as used in linear programming:
  - (i) Infeasibility.

(2 marks)

(ii) Unboundedness.

(2 marks)

CA43, CF43 & CP43 Page 3 Out of 4 (b) A training institution has four lecturers represented as L1, L2, L3 and L4. The Head of department wishes to assign them to handle three topics in quantitative analysis; T1, T2 and T3. This will be done based on competency which is measured in terms of mastery of subject matter and personal preference on the time schedule while satisfying policies and provisions of the institution.

All of the lecturers have taught the topics in the past and have been evaluated with the following scores in the three different topics as follows:

		Topics		
		T1	T2	T3
Lecturers	L1	42	16	27
	L2	48	40	25
	L3	50	18	36
	L4	58	38	60

Required:

(i) The optimal assignment for these three topics. (4 marks)

(ii) The maximum score. (2 marks)

(iii) The lecturer that will not be assigned any topic. (1 mark)

(c) The data given below shows the profits in shillings million made by an economic sector in your country during the various quarters of the given years.

Profits in quarters				
Year	Q1	Q2	Q Q3	Q4
2016	83	260	215	293
2017	105	383	248	553
2018	140	430	323	588
2019	168	503	340	755

Required:

(i) 3 quarter moving average of the series.

(5 marks)

(ii) The deseasonalised profit of the economic sector using the additive model.

(4 marks)

(Total: 20 marks)

**QUESTION FIVE** 

(a) With reference to analysis of variances (ANOVA) tests:

(i) Distinguish between one-way and two-way ANOVA tests. (2 marks)

(ii) Outline four assumptions of two-way ANOVA tests. (4 marks)

(iii) Explain the difference between ANOVA tests and T-tests. (4 marks)

(b) In the context of critical path analysis (CPA) method:

(i) Discuss two strengths and two weaknesses of CPA method. (4 marks)

(ii) Explain three practical applications of CPA method. (6 marks)

(Total: 20 marks)

#### **CIFA PART II SECTION 4**

### **CCP PART II SECTION 4**

### **QUANTITATIVE ANALYSIS**

THURSDAY: 28 November 2019.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

#### **QUESTION ONE**

(a) Business analytics is today emerging as a critical component of driving and sustaining business growth, particularly in the face of rising competition and other market dynamics.

#### Required:

In the context of the above statement, describe what "business analytics" entails.

(6 marks)

(b) Six consultants work for XYZ Ltd. A consultant has a 20% chance of being absent from work in a given day. The company needs to establish the probability of more than two consultants being absent from work.

#### Required:

Compute the above probability of absence assuming:

A binomial distribution.

(4 marks)

(ii) A Poisson distribution.

(4 marks)

(c) A small economy has two sectors,  $X_1$  and  $X_2$  producing a single product for their internal and external demand (in units), as summarised in the following transaction matrix.

Production sector	Purchase sector		Consumer demand	
	$\mathbf{X}_{1}$	. X <sub>2</sub>		
$\mathbf{X_{I}}$	500	800	200	
X <sub>2</sub>	600	1,400	400	

The projected consumer demand changes to 400 units and 800 units for sector X<sub>1</sub> and X<sub>2</sub> respectively.

### Required:

The required gross output of each sector in order to meet the new demand.

(6 marks)

(Total: 20 marks)

### **QUESTION TWO**

(a) The profit function (in Sh. "000") for a given company is given as:

Profit =  $10x - x^2 - 5$ 

Where x represents time in months.

#### Required:

(i) Cumulative profit in the break-even time interval.

(4 marks)

(ii) The best time to end the production.

(2 marks)

(iii) The total profit based on your result in (a) (ii) above.

(1 mark)

CA43, CF43 & CP43 Page 1 Out of 4 (b) A manufacturing company is testing a plant for acceptance. For the plant to be accepted, the mean reflectometer reading should be 19.5 and above.

A random sample of 25 readings is taken and found to have a mean of 19.7 with a standard deviation of 1.5

Required:

Test at 95% level of confidence whether the company should accept the new plant.

(3 marks)

(c) Explain two advantages and two disadvantages of decision trees as used in decision theory.

(4 marks)

. (d) A bank teller can open new accounts at an average rate of 3 accounts per hour. Customers requiring to open an account arrive at an average rate of 2 customers per hour.

The management of the bank has established a single channel single phase queuing system.

### Required:

(i) The average number of customers in the system.

(2 marks)

(ii) The average time spent by a customer in the system.

(2 marks)

(iii) The average number of customers in the queue.

(1 mark)

(iv) The utilisation factor of the service utility.

(1 mark) (Total: 20 marks)

### **OUESTION THREE**

- (a) In the context of time series analysis, describe three differences between "additive" and "multiplicative" models.
- (b) A small business is interested in establishing the relationship between the number of hits on its website (measured by number of visitors that have used the main menu) and the amount spent in website promotion (in Sh. "000").

The table below gives the figures for the last six months:

Month	Website hits	Website promotion (Ksh. "000")
1	25	1.0
2	24	1.2
3	56	1.6
4	54	1.4
5	55	1.2
6	58	1.8

### Required:

i) Illustrate, using a graph, the number of website hits against the amount spent in website promotion.

Comment on any relationship between website hits and the extent of promotion.

(4 marks)

(ii) Calculate the correlation coefficient and give an interpretation to its value.

(5 marks)

(iii) Determine the regression line.

(5 marks)

(Total: 20 marks)

CA43, CF43 & CP43 Page 2 Out of 4

### **OUESTION FOUR**

(a) (i) Explain the meaning of a "transition matrix".

(2 marks)

(ii) Outline two features of a transition matrix.

(2 marks)

(b) A chemical reaction in a processing plant is given by:

$$K = T^2 P^{-1}$$
, where:

T is an input matrix.

P<sup>-1</sup> is an inverse of matrix P.

K is an output matrix.

Given that 
$$T = \begin{pmatrix} 2 & 4 \\ 2 & 0 \end{pmatrix}$$
 and  $P = \begin{pmatrix} 1 & 7 \\ 0 & 4 \end{pmatrix}$ 

### Required:

Calculate the output matrix K.

(4 marks)

(c) Kikwetu Company Ltd. is the sole producer of 3 cosmetic products; Meta, Nzuri and Safi which currently have a market share of 40%, 40% and 20% respectively. Each week, some brand switching takes place. Of those who bought Meta the previous week, 60% buy it again while 20% switch to Nzuri and 20% to Safi. Of those who bought Nzuri the previous week, 50% buy it again while 40% switch to Meta and 10% to Safi. Of those who bought Safi, 80% remain loyal while 10% switch to Meta and 10% to Nzuri.

### Required:

(i) Construct a probability transition matrix of the switching probabilities.

(2 marks)

(ii) Construct a vector to represent the initial market share in percentages.

(1 marks)

(iii) Calculate a new market share a week after the current market share.

(3 marks)

(d) Simulation models have various applications in business.

### Required:

Discuss how simulation models can be applied in:

Predicting business outcome.

(3 marks)

(ii) Managing business risks.

(3 marks) (Total: 20 marks)

### **QUESTION FIVE**

(a) A businessman has three alternatives open to him, each of which can be followed by any of the five payoff conditional possible events (in millions of shillings) as given below.

Pay off conditional on events					
Alternative	$\mathbf{E_1}$	$\mathbf{E_2}$	$\mathbf{E_3}$	E <sub>4</sub>	$E_5$
Α	6	2	-2	-12	4
В	-6	-3	10	16	0
C	12	8	4	0	6

#### Required:

Advise the businessman on the best alternative under:

(i) Maximin criterion. (1 mark)

(ii) Maximax criterion. (1 mark)

CA43, CF43 & CP43 Page 3 Out of 4 (iii) The Hurwitz criterion, assuming a degree of optimism of 0.6.

(1 mark)

(iv) Laplace criterion.

(1 mark)

(b) A manufacturing firm produces two products, X and Y. The standard revenues and costs per unit of the products are as follows:

	Product			
	X		Y	
	Sh.	Sh.	Sh,	Sh.
Selling price		400	•	360
Variable costs:				
Material B (Sh.20 per kg)	80		80	
Direct labour (Sh. 16 per hour)	64		32	
Packing (Sh.24 per hour)	24		48	
Other variables	152	(320)		(300)
Fixed overhead (Sh.14 per hour direct labour)	<u></u>	(56)	- 11	(28)
Standard profit		24		32
A 30-3245 1 1 - m				<u>~ +</u>

### Additional information:

- 1. Packaging is a separate automated task and the cost relates to materials and electricity.
- 2. The maximum available inputs per week are limited as follows:

Material B 240 kg
Direct labour 200 hours
Packaging time 100 hours

3. The profit of the company could be increased by increasing the selling price of product Y.

### Required:

(i) Formulate and solve the above Linear programming model graphically.

(6 marks)

- (ii) Determine the maximum selling price of Product Y at which the solution in (b) (i) above would still remain optimal. (2 marks)
- (c) John Wekesa is the manager at Mikate Bakers Ltd. He intends to establish the cost of each bread. He gathers the following data on the total cost of each day's production for the last 10 days as shown in the table below:

Day	Number of units of bread (in hundreds)	Total cost
	mena (in nanareus)	(Sh."000")
1	45	46
2	42	43.2
3	55	46.6
4	43	48
5	60	56.4
6	40	44.8
7	48	46.2
8	53	50.6
9	36.6	40.2
10	34	33

### Required:

(i) The total cost function using the least squares me	ethod	sauares i	least so	the i	using	function	cost	The total	i)	(
--	-------	-----------	----------	-------	-------	----------	------	-----------	----	---

(6 marks)

(ii)	If each bread is sold at Sh.50, predict the break-even number of units of bread.	(2 marks)
	·	(Total: 20 marks)

#### CIFA PART II SECTION 4

#### **CCP PART II SECTION 4**

### QUANTITATIVE ANALYSIS

FRIDAY: 24 May 2019.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

### **OUESTION ONE**

(a) The marginal revenue and average cost functions of Biashara Limited are given as follows:

MR =  $40q - 3q^2$  (in Sh. million) and AC =  $2q - 10 \div 25/q$  (in Sh. million)

Where: MR is the marginal revenue function.
q is the quantity of units produced and sold.
AC is the average cost function.

#### Required:

(i) The profit function.

(2 marks)

(ii) The maximum profit.

(4 marks)

(b) A salesman earns a fixed monthly basic salary and a commission that is directly proportional to the number of units sold in the month. During the months of February 2019 and March 2019, the salesman's total earnings were Sh.60,000 and Sh.70,000 respectively. The number of units sold by the salesman in the months of February 2019 and March 2019 were 100 and 250 respectively. During the month of April 2019, the salesman sold 400 units.

### Required:

Using matrix algebra, determine:

(i) The fixed monthly basic salary of the salesman.

(2 marks)

(ii) Commission earned per unit sold.

(2 marks)

(iii) Total earnings of the salesman in the month of April 2019.

(2 marks)

- (c) A medium sized commercial bank has a clientele of 200 active customers. The bank operates three different types of accounts namely; current account, savings account and fixed deposit account. Information obtained from the bank indicates that:
  - 84 customers operate savings accounts,
  - 109 customers operate current accounts.
  - 106 customers operate fixed deposit accounts.
  - 45 customers operate both savings and current accounts.
  - 36 customers operate both savings and fixed deposit accounts.
  - 43 customers operate both fixed deposit and current accounts.

CA43, CF43 & CP 43 Page 1 Out of 4 Required:

Present the above information in a venn diagram. (i)

(3 marks)

The probability that a customer selected at random operates all the three types of accounts. (ii)

(4 marks)

The probability that a customer selected at random operates only two types of accounts.

(1 mark)

(iii)

(Total: 20 marks)

### **QUESTION TWO**

Enumerate four assumptions of: (a)

> A normal distribution. (i)

(4 marks)

A binomial distribution. (ii)

(4 marks)

A certain store has three cashiers serving customers at any given point in time. Each of the cashiers can serve on (b) average 5 customers per hour. The arrival rate of customers averages 12 customers per hour.

Required:

The probability that there are no customers in the queuing system at a given point in time.

(4 marks)

A manufacturing company intends to introduce a new product into the market. Three products have been proposed (c) namely; P1, P2 and P3. The company can only introduce one of the three products. The following are the estimates of the probabilities and annual profits of the three products at three given states of demand, namely; high, moderate and low.

	A	uvar beom (s	אוו. טטט ז	
State of demand	Probability	$\mathbf{P_l}$	P <sub>2</sub>	$P_3$
High	0.35	15,000	34,000	22,000
Moderate	0.40	25,000	30.000	15,000
Low	0.25	(5,000)	(3,000)	8,000

#### Required:

A decision tree showing the payoff and expected monetary value of each alternative action.

(6 marks)

Advise the management of the company on the best product to introduce into the market. (ii)

(2 marks)

(Total: 20 marks)

### **QUESTION THREE**

Explain the following terms as used in network planning and analysis: (a)

> Free float. (i)

(1 mark)

Total float. (ii)

(1 mark)

(iii) Project crashing. (I mark)

- In relation to hypothesis testing and estimation, distinguish between "null hypothesis" and "alternative (i) (b) (2 marks) hypothesis".
  - Beta Limited deals in the manufacture of a detergent named "safi". A recent survey undertaken to determine (ii) the percentage of residents who use "safi" revealed that out of 500 residents selected at random, only 10% used "safi". In order to increase the usage of "safi" amongst the residents, the company undertook an advertising campaign that cost Sh.2.5 million. A survey undertaken after the campaign revealed that out of 600 residents selected at random, 15% used "safi".

Required:

Determine whether the advertising campaign increased the usage of "safi" amongst the residents. (Use a significance (5 marks) level of 5%).

> CA43, CF43 & CP 43 Page 2 Out of 4

(c) Two competing companies, A and B, that deal in the sale of computers, have an equal share of the market. Both companies intend to increase their market share through adoption of three different media of advertisement, namely; newspaper, radio and television. The payoff table for the two companies, showing the gain or loss of customers from adoption of the different media of advertisement is as shown below:

Company	В
---------	---

Company A			
	Newspaper	Radio	Television
Newspaper	40	50	-17
Radio	10	25	-10
Television	100	30	. 60

### Required:

(i) The optimal strategies for companies A and B.

(8 marks)

(ii) The value of the game.

(2 marks)

(Total: 20 marks)

### **QUESTION FOUR**

(a) Highlight two differences between "transportation" and "assignment" models of linear programming.

(4 marks)

(b) Summarise three applications of shadow prices in decision making.

(3 marks)

(c) The table below shows the number of years of experience of ten salespersons and the respective mean monthly sales realised by the salespersons.

Salesperson	Years of experience	Mean monthly sales (Sh.)
Ì	6	180,000
2	4	150,000
3	2	80,000
4	10	500,000
5	7	190,000
6	4	100,000
7	6	200,000
8	7	220,000
9	12	600,000
10	8	200,000

### Required:

The coefficient of correlation. Interpret your result.

(7 marks)

Using ordinary least squares method, predict the mean monthly sales that would be realised by a salesperson having 15 years of experience.
 (6 marks)

(Total: 20 marks)

#### **OUESTION FIVE**

- (a) Outline four merits of using the project evaluation and review technique (PERT) to plan and analyse a project in an organisation. (4 marks)
- (b) A food processing company intends to install a computerised order processing system. The activities to be carried out during the installation of the system and their time estimates are given below:

		Time estimates (days	)
Activity	Optimistic time	Most likely time	Pessimistic time
A	7	17	27
В	5	31	23
·C	3	8	. 19
D	23	31	45
Е	9	21	39
F	9	11	25
G	2	5	14
Н	9	10	17

The above time estimates were analysed using a computer and the results of the analysis were as follows:

Activity	Earliest start time (days)	Latest start time (days)	Earliest finish time (days)	Latest finish time (days)
Α	0	0	17	17
В	17	17	29	29
С	29	43	38	52
D	29	29	61	61
E	38	52	60	74
F	61	61 '	74	74
G	61	79	67	85
Н	74	74	85	85

Required:
(i) The expected completion time and variance of each of the activities.

/!!X	TC								(4	o elso
(ii) · The total float of each activity.				(4 mari		arks)				
						_				

(iii) The expected completion time and variance of the project. (2 marks)

(iv) The 95% confidence interval for the project's completion time. (2 marks)

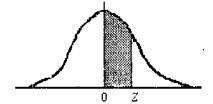

(Total: 20 marks)

www.someakenya.com

(8 marks)

#### **CIFA PART II SECTION 4**

### **CCP PART II SECTION 4**

### QUANTITATIVE ANALYSIS

FRIDAY: 30 November 2018.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

### **QUESTION ONE**

(a) Explain the following terms as used in decision theory:

(i) Opportunity loss.

(1 mark)

(ii) Expected value of perfect information.

(1 mark)

(b) Outline three assumptions of the transportation model.

(3 marks)

(c) A company operates under two departments, P and Q. Details relating to a sample of employees working in the two departments has been provided as follows:

	Department P	Department Q
Number of employees	29	24
Average monthly salary	\$h.260,000	Sh.310,000
Standard deviation	Sh.25,000 💉	Sh.30,000

### Required:

Determine whether there is any significant difference between the average monthly salaries of employees working in the two departments. (Use a significance level of 5 per cent). (6 marks)

- (d) Bidii College offers three courses namely; Accounting, Computing and Driving. The college has a total population of 500 students. Data obtained from the college revealed the following:
  - 329 Students were undertaking Accounting course.
  - 186 Students were undertaking Computing course.
  - 295 Students were undertaking Driving course.
  - 83 Students were undertaking both Accounting and Computing courses.
  - 217 Students were undertaking both Accounting and Driving courses.
  - 63 Students were undertaking both Computing and Driving courses.

### Required:

(i) Present the above information in a Venn diagram.

(3 marks)

(ii) The number of students undertaking all the three courses.

(4 marks)

(iii) The number of students undertaking only one course.

(2 marks)

(Total: 20 marks)

### **OUESTION TWO**

(a) ABC Limited manufactures and sells electronic calculators whose marginal cost function is given by:

MC = x - 100 (in thousands of shillings)

Where: MC is the marginal cost function.

x is the number of electronic calculators produced and sold.

The fixed cost of production amounts to Sh.250,000. The total revenue function is estimated to be quadratic in nature.

CA43, CF43 & CP43 Page 1 Out of 3 The table below shows the sales revenue realised by the company at three different production levels:

Number of electronic calculators

produced and sold (x)	Sales revenue (Sh."000")
20	1,600
40	3,200
60	4.800

Required:

(i) The total profit function.

(6 marks)

(ii) The maximum profit.

(2 marks)

- (b) X Limited, Y Limited and Z Limited deal in the production of detergents. On 1 January 2017, the three companies introduced a similar new detergent in the market. Prior to introduction of the new detergent, the three companies had an equal share of the market. A survey conducted on the market shares of the three companies as at 31 December 2017 revealed the following:
  - 1. X Limited had retained 90 per cent of its customers but had lost 3 per cent and 7 per cent of its customers to Y Limited and Z Limited respectively.
  - Y Limited had retained 75 per cent of its customers but had lost 10 per cent and 15 per cent of its customers to X Limited and Z limited respectively.
  - Z Limited had retained 80 per cent of its customers but had lost 5 per cent and 15 per cent of its customers to X Limited and Y Limited respectively.
  - There were no significant changes in the buying habits of the customers during the year.

Required:

(i) The market shares of the three companies as at 31 December 2018.

(3 marks)

(ii) The long run market shares of the three companies.

(9 marks)

(Total: 20 marks)

**QUESTION THREE** 

- (a) Explain the following terms as used in hypothesis testing:
  - (i) Level of significance.

(1 mark)

(ii) Region of rejection.

(1 mark)

- (b) Summarise three factors that determine the size of the Pearson product moment correlation coefficient. (6 marks)
- (c) The following data were obtained from the records of a certain company, relating to the year 2018:

Month	Total overhead costs - Y (Sh.)	Direct labour hours - X
January	14,250	856
February	13,000	536
March	13,000	640
April	12,500	600
May	13,250	680
June	13,750	808

Required:

(i) The least squares regression function relating the direct labour hours to the total overhead cost.

(7 marks)

(ii) The coefficient of determination.

(4 marks)

(iii) Comment on the results obtained in (c) (ii) above.

(1 mark)

(Total: 20 marks)

### **QUESTION FOUR**

The data below represent the number of students enrolled in a certain college over a four year period:

Number of students enrolled									
Quarter									
Year	1	2	3	4					
2015	70	100	80	60					
2016	50	40	120	80					
2017	90	70	70	40					
2018	60	100	130						

CA43, CF43 & CP43 Page 2 Out of 3

### **CIFA PART II SECTION 4**

### **CCP PART II SECTION 4**

### QUANTITATIVE ANALYSIS

FRIDAY: 25 May 2018.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

### **QUESTION ONE**

(a) Enumerate four assumptions that are implied in the application of the linear programming model.

(4 marks)

(b) The unit price and total cost functions associated with the production and sale of a certain electric component are given by the following equations:

$$P = 100 - 5q$$

and

TC =  $q^2 + 4q + 300$  (in thousands of shillings)

Where:

P is the unit price of the electric component.

q is the number of electric components produced and sold.

TC is the total cost.

#### Required

(i) The number of electric components that would maximise profit.

(4 marks)

(ii) The maximum profit.

(2 marks)

(iii) The maximum total revenue.

(2 marks)

(c) A certain firm has three main departments namely; steel, motor vehicles and construction. The three departments are interdependent. Each unit of output from the steel department requires 0.2, 0.3 and 0.4 units from steel, motor vehicles and construction departments respectively. Each unit of output from motor vehicles department requires 0.2, 0.4 and 0.2 units from steel, motor vehicles and construction departments respectively. A unit of output from the construction department requires 0.3, 0.4 and 0.1 units from steel, motor vehicles and construction departments respectively. The final demand of the firm comprises 20 million, 50 million and 30 million units of output from steel, motor vehicles and construction departments respectively.

### Required:

(i) The technical coefficient matrix.

(1 mark)

(ii) The total output of each department given that the Leontief's inverse matrix is as provided below:

(3 marks)

(iii) The change in the total output of the construction department, given that the final demand of steel department decreases by 2 million units and that of motor vehicles department increases by 10 million units whereas that of the construction department does not change. (4 marks)

(Total: 20 marks)

# QUESTION TWO

- (a) Distinguish between a "single server queuing model" and a "multiple server queuing model". (2 marks)
  - (ii) Highlight two assumptions of the queuing theory.

63

(2 marks)

- (b) Outline three advantages and three disadvantages of the simulation model as used in quantitative analysis. (6 marks)
- (c) Mwanaisha Ali sells tree seedlings at Mavuno market. A random sample of 9 of the seedlings had the following height in centimetres:

65

- 64
- 62

65

- 68
- 69

63

65.

# Required:

A 95 per cent confidence interval of the population mean height of the seedlings.

(4 marks)

(d) BC Limited operates two factories namely;  $X_1$  and  $X_2$ . Both factories deal in the production of a product named "Nguzo". The joint cost function for production of product "Nguzo" is given by:

$$C = f(q_1,q_2) = 2q_1^2 + q_1q_2 + q_2^2 + 500$$

Where:

C = Joint cost function of factories  $X_1$  and  $X_2$ 

 $q_1$  = Quantity produced by factory  $X_1$ 

 $q_1^*$  = Quantity produced by factory  $X_2$ 

BC Limite 1 has received an order to produce 200 units of product "Nguzo".

# Required:

The quantities of product "Nguzo" that should be produced by factories X<sub>1</sub> and X<sub>2</sub> respectively in order to minimise cost.

(6 marks)

(Total: 20 marks)

# **QUESTION THREE**

- (a) Explain the difference between the following sets of terms as used in hypothesis testing and estimation:
  - (i) "Type I error" and "type II error".

(2 marks)

(ii) "One tailed test" and "two tailed test"

(2 marks)

(b) Faida Limited deals in the manufacture and sale of a product named "Big". The company sells the product in two of its distribution outlets, A and B.

The data below relate to a random survey of monthly mean sales of the product in the two outlets:

Outlet	Monthly mean sales (Sh."000")	Standard deviation (Sh."000")	Sample size
Α	795	50	200
В	810	<b>70</b> .	175

# Required:

Test at a 5 per cent level of significance, whether there is a significant difference in the monthly mean sales of the two outlets.

(c) A manufacturing company is considering production of one of the three different types of pens, P<sub>1</sub>, P<sub>2</sub> and P<sub>3</sub>. The fixed and variable costs of producing the pens are as given below:

Type of pen	Fixed cost (Sh.)	Variable cost (Sh.)
$P_1$	2,000,000	100
$P_2$	3,200,000	80
$\overline{P_3}$	6,000,000	60

The demand of the pens unde, three different states of demand is provided below:

State of demand	Number of pens
Low	250,000
Moderate	1,000,000
High	1,500,000

The unit selling price of the pens is Sh.200.

Required:

(i) The payoff table of the company. (6 marks)

(ii) The type of pen to produce using the maximin criterion. (1 mark)

(iii) The type of pen to produce using the maximax criterion. (1 mark)

(iv) The type of pen to produce using the minimax regret criterion. (2 marks)

(Total: 20 marks)

#### **QUESTION FOUR**

(a) Define the following terms as used in game theory:

(i) Mixed strategy. (1 mark)

(ii) Value of the game. (1 mark)

(b) An intelligence test was undertaken by ten salesladies of a certain company.

The table below shows the intelligence test scores in percentages and the mean weekly sales in thousands of shillings made by the salesladies:

Saleslady	I	2	3	4	5	6	7	8	9	10
Intelligence test score (%)	40	70	50	60	80	50	90	40	60	60
Weekly sales (Sh. "000")	50	120	80	100	800	50	110	60	90	60

#### Required:

The coefficient of correlation. Interpret your result.

(8 marks)

(c) A firm manufactures two products, X and Y, subject to constraints on three raw materials, RM1, RM2 and RM3. The objective of the firm is to select a product mix that will maximise weekly profit. Each unit of product X earns a profit of Sh.2 whereas each unit of product Y earns a profit of Sh.1.

Details of the raw materials required for the production of products X and Y are as given below:

Raw material	Maximum quantity	Quantity required per unit of production			
	(units)	Product X	Product Y		
RM1	27	3	0		
RM2	30	0	2		
RM3	20	1	1		

# Required:

(i) A linear programming model of the firm.

(4 marks)

(ii) The optimum product mix using the simplex method.

(6 marks)

(Total: 20 marks)

# QUESTION FIVE

(a) An electricity company has established that the weekly number of occurrences of lightning striking transformers follows a Poisson distribution with a mean of 0.4 per week.

# Required:

(i) The probability that no transformer will be struck by lightning in a week.

(3 marks)

(ii) The probability that at most two transformers will be struck by lightning in a week.

(5 marks)

#### (b) The following information relates to a certain construction project:

Activity	Preceding activity	Time estimates (weeks)					
		Most optimistic	Most likely	Most pessimistic			
Α	-	2	4	12			
В	-	10	12	26			
С	Α	. 8	9	10			
D	Α	10	15	20			
Е	Α	7	7.5	11			
F	В, С	. 9	9	9			
G	D	3	3.5	7			
Н	E, F, G	5	5	5			

Required:

(i)	The network diagram for the project.	(8 marks)
(ii)	The critical path.	(1 mark)
(iii)	The probability of completing the project within a 30 - week duration.	(3 marks)

(Total: 20 marks)

# **CPA PART II SECTION 4**

#### CIFA PART II SECTION 4

#### CCP PART II SECTION 4

# QUANTITATIVE ANALYSIS

FRIDAY: 1 December 2017.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

# QUESTION ONE

(a) Outline four applications of mathematical functions in business.

(4 marks)

(b) Highlight the four components of a time series.

(4 marks)

- (c) A survey was conducted on 800 households to determine their preference for three consumer goods, namely Fex, Gex and Mex. The results of the survey were as follows:
  - 230 households preferred Fex.
  - 245 households preferred Gex.
  - 325 households preferred Mex.
  - 30 households preferred all the three goods.
  - 70 households preferred Fex and Mex.
  - 110 households preferred Fex only
  - 185 households preferred Mex only.

# Required:

(i) Present the above information in a venn diagram.

(4 marks)

(ii) The number of households that preferred Fex and Gex.

(1 mark)

(iii) The probability that a household selected at random does not prefer any of the three goods.

(1 mark)

(d) Soda Baridi Limited has a computerised customer billing system. Customers' accounts are classified as being paid, delinquent or bad debt. The company has a total of 1,500,000 customer accounts. A computer program was developed to display transition of accounts among the three categories. The output from the program is summarised below:

		Paid	Delinquent	Bad debt
	Paid	285,000	15,000	0
From	Delinquent	20.000	700,000	30,000
	Bad debi	0	0	450,000

The above transitions took place between 31 December 2015 and 31 December 2016.

# Required:

The percentage of customers that will be in each of the three categories of accounts as at 31 December 2017. (6 marks)

(Total: 20 marks)

#### **QUESTION TWO**

(a) Enumerate three circumstances under which the Poisson distribution is most applicable.

(3 marks)

(b) A company produces two types of electric components whose information has been provided to you as follows:

	Component X	Component Y
Mean life in hours	1,600	1.528
Standard deviation in hours	132	149
Sample size	120	110

# Required:

Determine whether the quality of the two types of electric components differ significantly. (Use a significance level of 95%).

(c) A survey conducted on citizens of a certain country to determine the annual per capita income indicated that the annual income of the citizens is normally distributed with a mean of Sh.980,000 and a standard deviation of Sh.160,000. One citizen was randomly selected from the country.

# Required:

The probability that the annual income of the citizen:

(i) Is greater than Sh.500,000.

(2 marks)

(ii) Is greater than Sh.1,220,000.

(2 marks)

(iii) Lies between Sh.852,000 and Sh.1,100,000.

(2 marks)

(d) Excellent Products Limited manufactures four products, A, B, C and D, using four machines, M<sub>4</sub>, M<sub>5</sub>, M<sub>3</sub> and M<sub>4</sub>. The total outputs of the four products from the four machines are as shown below:

		Output (units "000")					
		A	В	C	D		
Machines	$M_i$	12	12	6	13		
	$M_2$	18	20	22	20		
	$M_3$	16	15	12	18		
	$M_4$	14	12	16	/12		

The company intends to assign the production of each output to a particular machine.

#### Required:

Advise the management of Excellent Products Limited on the best assignment that will maximise production. (4 marks)

(e) The demand and total cost functions (in thousands of shillings) of a certain company that deals in the manufacture of a product name "Exe" are given as follows:

$$P = 75 - 0.18Q$$
and
$$TC = 80Q + 5Q^{2} - 0.03Q^{3}$$

Where:

P is the unit selling price.

Q is the quantity demanded in units.

TC is the total cost.

Required:

(i) The profit function.

(1 mark).

(ii) The output level that would maximise profit.

(3 marks)

(Total: 20 marks)

**QUESTION THREE** 

(a) Distinguish between "regression analysis" and "correlation analysis".

(2 marks)

(b) Summarise two applications of rank correlation.

(2 marks)

CA43, CF43 & CP43 Page 2 Out of 4 (c) The following exponential function represents the advertising cost of a certain small enterprise:

y = ab<sup>x</sup>

Where:

y is the advertising cost in thousands of shillings

a, b are constants over a period of seven years.

x is the period under consideration.

The actual advertising cost of the enterprise over a seven year period is given as follows:

Year	1	2	3	4	5	6	7
Advertising cost (Sh. "000")	32	47	65	92	132	190	275

#### Required:

(i) The advertising cost function of the enterprise, using the normal equation.

(7 marks)

(ii) The advertising cost of the enterprise in year 8.

(1 mark)

(d) The management of New Era Computer Systems Limited is planning to launch a new product branded Zimsang. The fixed cost of Zimsang is Sh.80,000. However, the selling price, variable costs and annual sales volume of Zimsang are uncertain. The data below relate to product Zimsang:

Unit selling		Variable cost		Sales volume		
price (Sh.)	Probability	(Sh.)	Probability	(units)	Probability	
60	0.25	20	0.25	40.000	0.30	
80	0.45	40	0.55	60,000	0.35	
100	0.30	60	0.20	100.000	0.35	

# Required:

Simulate the average profit of product Zimsang on the basis of 10 trials. Use the following random numbers:

81	32	60	04	46	31	67	25,00	24	10	40	02	39
68	98	59	66	90	12	64er	79	31	86	68	82	89
25	<b>i</b> 1	98	16			3						

(8 marks)

(Total: 20 marks)

# **QUESTION FOUR**

(a) In a certain busy business facility, the mean arrival rate of clients is 800 clients per hour. The mean service rate is 820 clients per hour. The facility operates between 6.00 a.m. and 6.00 p.m. every day. The management of the facility are concerned about the average number of customers in the queuing system and wish to improve the facility in order to serve an average of 847 clients per hour. The cost of improving the facility amounts to Sh.18,500 per day. Each hour lost costs the facility Sh.125.

# Required:

(i) The average waiting cost per day.

(4 marks)

(ii) Advise the management on whether they should improve the facility.

(4 marks)

- (iii) Compare the probabilities that the total number of clients in the queue and those being served is greater than 17 in the existing and in the improved facilities. (4 marks)
- (b) Two airlines, K and Q are interested in increasing their market shares. Airline K has three available strategies, advertising its special fare, advertising its unique features or advertising its safety record. On the other hand, Airline Q also has three available strategies; do nothing, advertise its special fare or advertise its special features.

The matrix below shows the gains and losses associated with the different available strategies in millions of shillings. Positive values favour Airline K and negative values favour Airline Q.

		Airline Q			
		$\mathbf{Q}_1$	$\mathbf{Q}_2$	$Q_3$	
	$\mathbf{K}_{\mathbf{t}}$	- 30	0	- 90	
Airline K	$K_2$	<b>-40</b>	- 15	-20	
	$K_3$	80	20	50	

CA43, CF43 & CP43 Page 3 Out of 4

	Where:					
	$K_1$	=	Advertise special fare.			
	K2	=	Advertise unique features			
	$K_3$	=	Advertise safety record.			
	$Q_1$	=	Do nothing.			
	$\overrightarrow{\mathbf{Q}_2}$	=	Advertise special fare,			
	$Q_3$	=	Advertise special features			
	Requir	ed:				
	(i)	The	optimal strategies for each airli	ine.		(7 marks)
	(ii)	The	value of the game.			(1 mark) (Total: 20 marks)
QUES (a)		the fo	llowing terms as used in game	theory:		
	(i)	Sadd	le point.			(1 mark)
	(ii)	Dom	inance.			(1 mark)
(b)	Suggest	t two a	reas in which advanced inform	ation technology could be used	to solve quantitative ana	dysis problems. (2 marks)
(c)	The dat project.		w relate to normal duration a	and cost along with crash dura	tion and cost for each	activity of a certain
	Activity		Normal duration (Days)	Crash duration (Days)	Normal cost (Sh.)	Crash cost (Sh.)
	1 – 2		6	4	2,800,000	3,800,000
	1 – 3		8	5 60	4,000,000	5,600,000
	2 - 3		4	2	2,200,000	3,000,000
	2 – 4		3	2	1,600,000	2,800,000
	3 - 4		Dummy		-	-
	3 – 5		6	3	1,800,000	3.200,000
	4 - 6		10	6	5,000,000	7,000,000
	5 6		3	4 5 2 2 2 3 6 2 2	1,000.000	1,600.000

The indirect cost of the project is Sh.600,000 per day.

# Required:

(b)

(c)

The normal duration and the corresponding total cost. (i) (6 marks)

(ii) The minimum duration and the corresponding total cost. (8 marks)

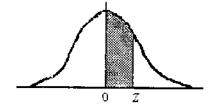

(iii) The optimum duration and the corresponding total cost. (2 marks)

(Total: 20 marks)

# QUANTITATIVE ANALYSIS

FRIDAY: 26 May 2017.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

#### QUESTION ONE

(a) Describe four types of sets as used in set theory. (4 marks)

- (b) Explain the following terms as used in Markov analysis:
  - (i) Transition probability.

(1 mark)

(ii) Absorbing state. (1 mark)

The average revenue and marginal cost functions of a certain company are given by: (c)

$$AR = 650 - 15x$$

$$MC = 9x^2 - 14x + 180$$

(3 marks)

- (3 marks)
- The tixed cost of production is Sh. 25 million.

  Required:

  i) The level of arks. Market Intelligence Research Limited carried out a study on nine households to determine the monthly income levels (d) and the amount of expenditure incurred by the households.

The results of the study are as shown below:

Monthly Income (Sh. "000")

15

3 20 14

12

Expenditure (Sh.)

2,000

200 500 500 2,500 800 1,500

11

1,500

10

1,600

# Required:

- The least squares regression function relating the monthly income and expenditure incurred by the households. Interpret your results. (7 marks)
- The expenditure incurred by a household whose monthly income is Sh.30,000. (ii)

(1 mark)

(Total: 20 marks)

CA43, CF43 & CP43 Page 1 Out of 4

# **QUESTION TWO**

(a) Highlight four properties of a binomial experiment.

(4 marks)

(b) Viwanda Limited is a company that operates in the printing industry. The company has a total of 30 machines that operate a 24 hour cycle. The probability of a machine breaking down on any given day is 0.015.

# Required:

- (i) The probability that exactly four machines break down in a given day, using poisson distribution. (3 marks)
- (ii) The probability that exactly four machines break down in a given day, using binomial distribution.(2 marks)
- (iii) Comment on the results obtained in (b)(i) and (b)(ii) above.

(2 marks)

(c) ABC Limited has recently developed a new product named "Exe". The demand for "Exe" is expected to be low, medium or high with probabilities of 0.25, 0.45 and 0.30 respectively.

The product is to be manufactured at small or large scale production with the following annual profit estimates:

		Small scale pro-	duction	Large scale production			
	Prof	it (Sh. million)	Probability	Profit (Sh. million)	Probability		
Demand	Low	40	0.25	5	0.25		
	Medium	140	0.45	90	0.45		
	High	180	0.30	280	0.30		

# Required:

Advise ABC Limited on the best course of action based on the following approaches:

(i) Expected profit.

(3 marks)

(ii) Minimising risk.

(6 marks) (Total: 20 marks)

5,400

# **OUESTION THREE**

(a) Mwangaza Limited deals in the production of electric bulbs. A random sample of 10 electric bulbs produced by the company yielded the following results on the lifetime of the bulbs:

Lifetime (hours) 4,400 4,800 3,700 3,900 5,500 4,000 3,700 4,100 4,000

The hypothetical population mean of the lifetime of the electric bulbs is given as 4,000 hours.

#### Required.

Test at a 5 per cent level of significance, whether there is a significant difference between the sample mean and the population mean.

(8 marks)

(b) Green Furniture Limited manufactures two models of plastic chairs, C<sub>1</sub> and C<sub>2</sub> from plastic waste, using two automated machines, X and Y. The following information relates to the production of the two models of chairs for the coming year:

		$\mathbf{c_i}$	$C_2$
Maximum sales (units)		8,000	12,000
Selling price (Sh.)		1,000	900
Machine time (hours):	X	0.5	0.3
	Y	0.4	0.45

The maximum operating hours of machines X and Y are 3,400 and 3,840 respectively. The maximum quantity of plastic waste available is 34,000 kilogrammes and each chair requires 4 kilogrammes of plastic waste. The company purchases plastic waste at Sh.50 per kilogramme. Variable machine overheads are estimated to be Sh.250 and Sh.300 per machine hour for machines X and Y respectively. All chairs produced are expected to be sold during the period. A computer generated print out of the linear programming model is as given below:

CA43, CF43 & CP43 Page 2 Out of 4 Objective function value 4,441,250.

Variable	Value	Reduced values	Objective coefficient	All increase	All decrease
Cı	4,250	0	555	261.70	65.00
$C_2$	4,250	0	490	65.00	157.00
Constraints	Value	Shadow Price	Right hand side constraint	Allowable increase	Allowable decrease
Plastic waste	34,000	98.125	34,000	1,733.33	6,800
Machine X	3.400	325.000	3,400	850.00	850
Machine Y	3,612.5	Ü	3,800	-	227.5

# Required:

- (i) Formulate the mathematical model for the linear programming problem. (4 marks)
- (ii) The maximum contribution of  $C_1$  and  $C_2$ . (2 marks)
- (iii) Explain the effect on contribution of the availability of additional plastic waste and machine time. (2 marks)
- (iv) Explain the sensitivity of the model to changes in contribution per unit of  $C_1$  and  $C_2$ . (2 marks)
- (v) The increase in contribution of Green Furniture Limited assuming that the management overcomes the plastic waste constraint. (2 marks)

(Total: 20 marks)

# QUESTION FOUR

(a) Outline five assumptions of game theory.

(5 marks)

(b) The table below shows marks scored by 8 students in Mathematics and English subjects:

Student:	ì	2	Ø3	4	5	6	7	8
Marks scored in Mathematics:	31	36	44	28	56	76	36	96
Marks scored in English:	56	46	66	46	36	26	46	76

# Required:

The rank coefficient of correlation. Interpret your result.

(5 marks)

(c) Pure Grain Society is considering the planting of wheat on a piece of land it recently acquired.

The data below relate to the estimated selling prices, yield and cost of planting the wheat:

Selling price per tonne (Sh."000")	Probability	Yield per acre (tonne)	Probability	Cost per acre (Sh."000")	Probability
240	0.18	70	0.09	12,000	0.14
250	0.29	75	0.16	14,000	0.22
260	0.31	80	0.24	16,000	0.36
270	0.14	85	0.38	18,000	0.26
280	0.08	90	0.13	20,000	0.02

You are provided with the following random numbers:

03 91 38 55 17 46 32 43 69 72 24 22 61 96 30 32

# Required:

Using eight trials, simulate the average profit of Pure Grain Society.

(10 marks)

(Total: 20 marks)

CA43, CF43 & CP43 Page 3 Out of 4

# **QUESTION FIVE**

(a) Enumerate five characteristics of a simple queuing system.

(5 marks)

(b) Two companies, A and B, are competing for business whereby one company's gain is the other company's loss. The pay-off matrix is given as follows:

# Company B's strategies

		$\mathbf{B_i}$	$\mathbf{B_2}$	$\mathbf{B}_3$
Company A's strategies	$\mathbf{A_1}$	7	4	3
	$A_2$	4	2	Ü
	$A_3$	3	-1	-2
	A,	1	5	-3

Required:

The optimal strategy for each company.

(4 marks)

(c) Ujenzi Limited has been awarded a contract to build an office block. The tasks of the building project have been analysed as follows:

Activity	Preceding activity	Duration (months)	Total cost (Sh. million)
A	-	8	100
В	-	2	75
C	Α	3	135
D	A	7	70
Е	В	5	160 💉
F	C, D	9	255
G	D	2	30
Н	D, E	4	90
1	G, H	3	55

The overhead costs of the project amount to Sh.5 million per month.

# Required:

(i) A network diagram for the project.

(5 marks)

(ii) The minimum cost of the project.

(2 marks)

(iii) Ujenzi Limited has been offered a bonus of Sh.25 million if they complete the project within a period of 20 months or less. The table below shows activities that would require to be crashed and their respective total costs:

Activity	Duration	Total cost		
	(months)	(Sh. million)		
Α	6	125		
В	ŧ	90		
D	5	85		
Е	3	200		
F	7	275		
Н	2	95		

Determine whether or not Ujenzi Limited should accept the bonus offer.	(4 marks
	(Total: 20 marks

# QUANTITATIVE ANALYSIS

FRIDAY: 25 November 2016.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

# **QUESTION ONE**

Explain the following terms as used in linear programming: (a)

(i)	Infeasibility.	(1 mark)
(ii)	Unboundedness.	(1 mark)
(iii)	Alternate optimality.	(1 mark)

The following information relates to product "X" which is susceptible to three types of defects; A, B and C. The (b) probability of product "X" containing defect C depends on whether the product contains any other defects, A or B. The probabilities of the product containing the defects are as follows:

Type of defect	Probability
A	0.15
В	0.14
C (if it neither contains defect A nor defect B)	0.3
C (if it contains either defect A or defect B)	0.2
C (if it contains both defects A and B)	0.1

Required:

The probability that product "X" contains no defect.

(5 marks)

The probability that product "X" contains only one of the three defects. (ii)

(4 marks)

The data below show the number of students enrolled in six colleges for a certain course, before and after the course (c) was advertised in a certain publication:

College	Number of students before advertisement	Number of student after advertisemen		
ı	165	170		
2	140	141		
3	143	142		
4	160	167		
5	162	168		
6	154	157		

Using the paired t-test, determine whether the advertisement was a success at a 5 per cent level of significance.

(8 marks)

(Total: 20 marks)

CA43, CF43 & CP43 Page 1 Out of 4

# **QUESTION TWO**

(a) Highlight four applications of Markov analysis in business.

- (4 marks)
- (b) Faidika College offers three courses, namely; Accounting, Information Technology and Statistics. The marketing department of the college conducted a survey on 500 students to determine the number of students enrolled for each of the three courses. The results of the survey were as follows:
  - 329 students were enrolled for Accounting.
  - 186 students were enrolled for Information Technology.
  - · 295 students were enrolled for Statistics.
  - 83 students were enrolled for Accounting and Information Technology.
  - 217 students were enrolled for Accounting and Statistics.
  - 63 students were enrolled for Statistics and Information Technology.

# Required:

(i) Illustrate the above information in a venn diagram.

(4 marks)

(ii) The probability that a student is enrolled for all the three courses.

(I mark)

- (iii) The probability that a student is enrolled for Accounting or Statistics but is not enrolled for Information Technology. (I mark)
- (c) The following data show results of a regression run on the variations in labour cost as a function of labour hours worked in a certain company:

# Regression statistics

R-squared	$X_1$
Multiple R	$X_2$
Standard error	0.7320
Observations	24

#### Required:

(i) The missing values of  $X_1$ ,  $X_2$ ,  $X_3$ ,  $X_4$ ,  $X_5$ ,  $X_6$  and  $X_7$ .

(7 marks)

(ii) A 95 per cent confidence level of the labour hours worked.

(3 marks) (Total: 20 marks)

# **QUESTION THREE**

(a) TOC Limited, an oil prospecting company, intends to set up two oil refineries, refinery I and refinery II.

The following information relates to TOC Limited:

- 1. The company will produce two types of fuel; diesel and petrol, in each of the two refineries.
- Three types of resources namely; crude oil, furnace time and mixer will be required to produce each litre of fuel.

CA43, CF43 & CP43 Page 2 Out of 4 3. The resource requirements for each of the two refineries is as follows:

Fuel per litre	Crude oil (litres)	Furnace time (hours)	Mixer (litres)
Diesel (Refinery I)	3	2	8
Petrol (Refinery I)	1	1	6
Diesel (Refinery II)	3	I	7
Petrol (Refinery II)	2	l	5

- 4. The daily amount of crude oil available at the two refineries are 12,000 litres and 15,000 litres for refinery I and refinery II respectively.
- 5. The hours of furnace time available at the two refineries are 10 hours and 4 hours for refinery I and refinery II respectively.
- 6. The total amount of mixer available for use at the two refineries is 80,000 litres per day.
- 7. The fuel is expected to be sold at Sh.170 per litre of diesel and Sh.160 per litre of petrol.
- 8. All fuel produced is expected to be sold to a sole distributor. It will cost Sh.80 to transport each litre of fuel from refinery I and Sh.100 from refinery II to the sole distributor.
- 9. Assume that crude oil cannot be transported from one refinery to another.

#### Required:

Formulate a linear programming model to maximise TOC Limited's revenue, assuming that only transport cost is variable.

(7 marks)

(b) The following data show quarterly production of oranges by a certain large scale farmer in thousands of kilogrammes:

Year	Quarter 1	Quarter 2	Quarter 3	Quarter 4
2012	250	200	180	300
2013	330	280	260	380
2014	410	370	340	460
2015	478	-	~	-

#### Required:

(i) The adjusted seasonal component for the four quarters using the additive model.

(8 marks)

(ii) The deseasonalised production data for each quarter.

(4 marks)

(iii) Explain the significance of the deseasonalised data.

(1 mark) (Total: 20 marks)

# **QUESTION FOUR**

(a) Enumerate four limitations of linear programming models.

(4 marks)

(b) Summarise four decision criteria used in decision making under uncertainty.

(4 marks)

An electronics company sells programmable calculators at a unit price of Sh.100. Studies indicate that the company can sell additional 100 calculators per year for Sh.5 decrease in unit price and 100 calculators per year less for Sh.5 increase in unit price. The company currently sells 3,000 calculators per year. The cost function of the company is assumed to be linear with a fixed cost of Sh.10,000 and variable cost of Sh.65 per calculator.

# Required:

(i) The price and quantity that would maximise profit.

(4 marks)

(ii) The maximum profit.

(I mark)

A barber shop has a total of 10 available seats for customers. The inter-arrival times for customers are exponentially distributed with an average of 20 customers arriving each hour. Any prospective customer who finds all the seats occupied does not wait for service but instead leaves. The barber takes an average of 12 minutes to cut each customer's hair. Hair cut time duration is exponentially distributed.

CA43, CF43 & CP43 Page 3 Out of 4 Required:

The average number of hair cuts that will be completed by the barber each hour. (i)

(4 marks)

The average time each customer will spend at the barber shop. (ii)

(3 marks) (Total: 20 marks)

**QUESTION FIVE** 

Outline five limitations of game theory. (a)

(5 marks)

The data below relate to activities of a certain project that is to be undertaken by Ujuzi Consultancy Company: (b)

Activity	Preceding activity	Time ( Optimistic	Most probable	Pessimistic
Α	_	1.5	2.0	2.5
В	Α	2.0	2.5	6.0
c	_	1.0	2.0	3.0
D	C	1.5	2.0	2.5
E	B,D	0.5	1.0	1.5
F	E	1.0	2.0	3.0
Ġ	B,D	3.0	3.5	7.0
Н	G	3.0	4.0	5.0
1	F,H	1.5	2.0	2.5

Required: A network diagram of the project. (i)

(8 marks)

The expected completion time of the project. (ii)

(2 marks)

The probability that the project will be completed between 13 weeks and 17 weeks. (iii)

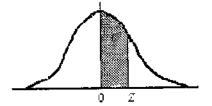

(5 marks)

(Total: 20 marks)

# QUANTITATIVE ANALYSIS

FRIDAY: 27 May 2016.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

# QUESTION ONE

- Explain four differences between the project evaluation and review technique (PERT) and the critical path analysis (CPA).
- (b) A certain audit firm has two categories of employees, auditors and assistant auditors. The total monthly salary of 1 auditor and 5 assistant auditors amount to Sh.456,755 whereas the total monthly salary of 3 auditors and 9 assistant auditors amount to Sh.985,005. The firm has a total of 6 auditors and 14 assistant auditors. The employees contribute 12 per cent of their monthly salaries towards their sacco society.

The monthly salary of an auditor and an assistant auditor, using matrix algebra. (i)

(4 marks)

(ii) The employees' total monthly contribution towards their sacco society. (1 mark)

Shujaa Limited deals in the manufacture of a product named "Zed". The product "Zed" is produced on order and the (c) company does not keep inventory of the product. The demand and total cost functions (in thousands of shillings) of the company are given as follows: WWW.SOMERY

$$P = 190 - q$$

and

$$TC = q^2 + 10q + 500$$

Where: P is the unit selling price.

q is the quantity demanded in units.

TC is the total cost.

# Required:

The maximum profit of the company. (i)

(6 marks)

The output level that would maximise total revenue. (ii)

(1 mark)

(Total: 20 marks)

# **QUESTION TWO**

(a) Distinguish between a "univariate function" and a "multivariate function".

(2 marks)

(b) The mean weight of 500 packaging tins from a production process are normally distributed with a mean weight of 151 grammes and a standard deviation of 15 grammes.

Required:

(i) The number of packaging tins that weigh between 120 grammes and 155 grammes. (4 marks)

(ii) The number of packaging tins that weigh more than 185 grammes.

(3 marks)

CA43, CF43 & CP43 Page 1 Out of 4

(c) The following data were obtained from the records of Kiwandani Limited for the year 2015:

	Total	Director labour
	overhead cost (y)	hours (x)
Month	(Sh.)	
January	16,250	1,056
February	15,000	736
March	15,000	840
April	14,500	800
May	15,250	880
June	15,750	1,008

# Required:

(i) The least squares regression function relating direct labour hours and total overhead cost.

(7 marks)

(ii) The coefficient of determination. Comment on your result.

(4 marks)

(Total: 20 marks)

# **QUESTION THREE**

(a) Explain the following terms as used in game theory:

(i) Pay-off.

(1 mark)

(ii) Value of a game.

(1 mark)

(b) Highlight eight steps followed in the simulation process.

(8 marks)

(c) The table below shows the actual sales and target sales of eight sales agents for the year 2015 in millions of shillings.

Sales agent	1	2	3	4	- Ho	6	7	8
Actual sales (y)	45	41	50	56 À	60	42	43	52
Target sales (x)	40	2 <b>7</b>	45	38	52	35	29	44

# Required:

The Spearman's rank correlation coefficient. Interpret your result.

(4 marks)

(d) A cashier at a departmental store can serve on average 24 customers per hour. The arrival rate of customers averages 20 customers per hour. The departmental store applies a single channel queuing system.

#### Required:

(i) The probability that the cashier is idle.

(2 marks)

(ii) The average number of customers in the queuing system.

(2 marks)

(iii) The average time a customer spends in the queue waiting to be served.

(2 marks)

(Total: 20 marks)

#### **QUESTION FOUR**

(a) Viwanda Limited deals in the production of a product named "Nguvu". The production cost of the product is Sh.500 per unit (excluding packaging cost). The product is sold at Sh.1,000 per unit. The company is considering the purchase of one out of three different packaging systems. The cost data for the three packaging systems are as follows:

Packaging system	Purchase cost Variable cost per unit of product		Scrap value	
	Sh. "000"	Sh. "000"	Sh. "000"	
Α	100	1.50	10	
В	200	1.00	20	
C	400	0.50	40	

CA43, CF43 & CP43 Page 2 Out of 4 All the three packaging systems have a useful life of one year after which they would be sold at their estimated scrap values. The probability distribution for the demand for product "Nguvu" is as provided below:

Demand (units)	Probability
100	0.3
200 ·	0.6
400	0.1

# Required:

Recommend the packaging system that should be purchased by Viwanda Limited.

(8 marks)

(b) Farm Produce Limited is a producer and distributor of maize flour. The company owns milling plants in Eldoret, Nanyuki and Narok towns. The milling plants have not been able to meet the demand orders of the company's distribution offices located in Mombasa, Kisumu, Nairobi and Isiolo towns. The company is considering the construction of a new milling plant either in Nakuru town or Meru town, in order to expand its production capacity.

The data below relate to the company's production and demand requirements.

Milling plant	Monthly	Unit production	
	output (units)	cost (Sh.)	
Eldoret	30,000	96	
Nanyuki	12,000	100	
Narok	28,000	104	

Distribution office	Monthly demand (units
Mombasa	20,000
Kisumu	24,000
Nairobi	30,000
Isiolo	18,000

# Additional information:

- 1. The estimated unit production costs in Nakuru and Meru towns are Sh.98 and Sh.106 respectively.
- 2. The unit transportation costs (in shillings) from each milling plant to each distribution office are given as follows:

		15	To		
		Mombasa	Kisumu	Nairobi	Isiolo
	Eldoret	64	36	52	58
From	Nanyuki	56	52	44	32
	Narok	58	42	36	50

3. The estimated unit transportation costs (in shillings) from each of the proposed milling plants to each distribution office are as follows:

		To				
		Mombasa	Kisumu	Nairobi	lsiolo	
From	Nakuru	60	46	40	52	
	Meru	62	56	46	28	

4. Assume that the construction of one of the proposed milling plants would satisfy the demand deficiency.

# Required:

Using the Vogel's approximation method (VAM), advise the management of Farm Produce Limited on the best location to construct the milling plant. (12 marks)

(Total: 20 marks)

CA43, CF43 & CP43 Page 3 Out of 4

# **QUESTION FIVE**

Outline three differences between the normal distribution and the t-distribution.

(3 marks)

(b) A certain project is expected to be completed within 18 weeks. The expected net revenue if the project is completed on time is Sh.1,120,000 but a penalty of Sh.484,000 will be imposed if the project is not completed on time. The cost of the project is Sh.459,000. The standard deviation of the project's duration is 2.08 weeks.

The table below is a summary of activities required to complete the project, the duration of the activities and their preceding activities.

Activity	Duration (weeks)	Preceding activity
Α	5	-
В	2	-
C	4	•
D	2	В
Е .	5	B,C
F	7	C
G	6	A,D

# **QUANTITATIVE ANALYSIS**

FRIDAY: 27 November 2015.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

# **QUESTION ONE**

(a) Star Manufacturers Limited specialises in the production of two products, A and B. The manufacturer sells the products at a fixed selling price to its customers. The following table shows the requirements for production of products A and B:

	Pro	duct	
	A	В	Available resources
Materials (Kilogrammes)	5	7	13,400
Labour (Hours)	3	4	7,800

Product A is sold for Sh.2,080 per unit whereas product B is sold for Sh.7,939 per unit. The variable costs of production are uncertain with the following margins of error:

	Pro	oduct	
	A	В	Error
Labour/Hour (Sh.)	140	265	± 10%
Material/Kilogramme (Sh.)	236	710	± 5%

Star Manufacturers Limited utilises all the available resources.

#### Required:

Using matrix algebra, determine:

(i) The total expected revenue.

(3 marks)

(ii) The expected maximum profit.

(3 marks)

(iii) The expected minimum profit.

(3 marks)

- (b) Apex Limited is planning to launch a new product in the market. It has undertaken a survey on the product's colour, brand name and packaging. The company sent questionnaires to 200 potential customers to obtain their views on the three attributes of the product. The results were as follows:
  - 24 persons liked the packaging and the brand name.
  - 77 persons liked the brand name or the colour but did not like the packaging.
  - 40 persons liked the colour only.
  - 120 persons liked the colour or the brand name.
  - 23 persons liked the colour and the packaging.
  - 43 persons liked at least two of the three attributes.
  - 5 persons did not like any of the three attributes.
  - The questionnaires of 25 persons were not received back.

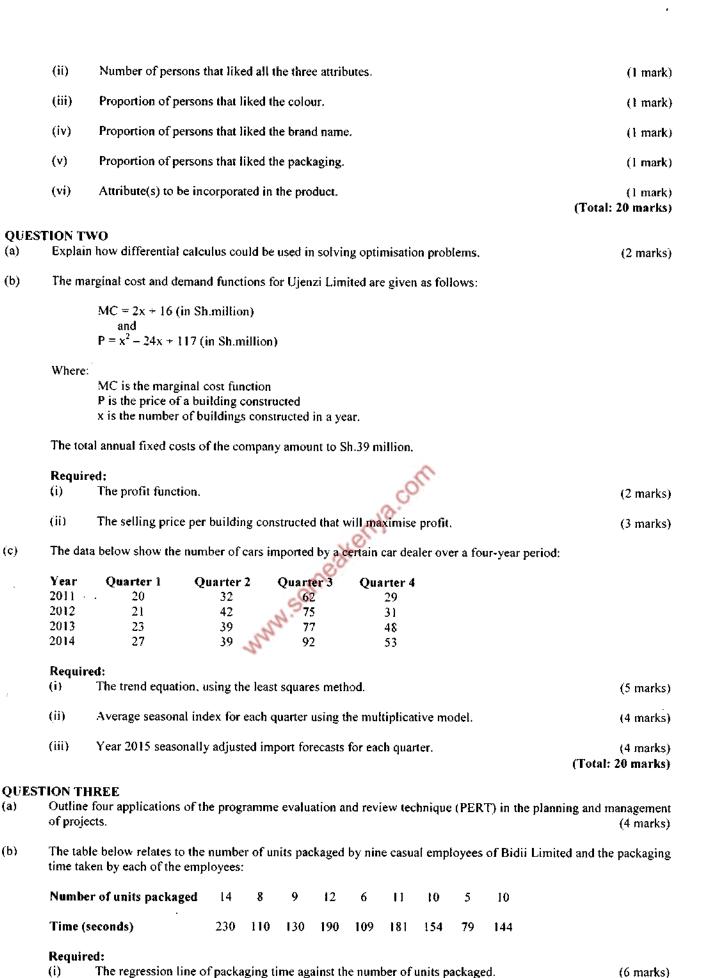

The company's policy is to incorporate an attribute in the product if at least 50 per cent of the respondents liked the attribute.

# Required:

(i) Present the above information in a venn diagram.

(6 marks)

# PILOT PAPER

September 2015.

Time Allowed: 3 hours.

Answer ALL questions. Marks allocated to each question are shown at the end of the question. Show ALL your workings.

#### **QUESTION ONE**

(a) Highlight any four assumptions of Markov Analysis.

(4 marks)

(b) The research industry in your country has three market research firms namely X, Y and Z which provide research services. The following data has been collected in relation to the flow of clients among the three firms:

	Number	Market				Number	Market				
	of clients	share	Ť	Gains from Losses to					of clients	share	
	31.12.2013	13 X		Y	Z	X	Y	Z	31.12.2014	4	
X	408	0.177	-	24	40	-	€30	18	424	0.184	
Y	832	0.361	30	-	10	24	) _	14	834	0.362	
Z	1062	0.461	18	14	-	40	10	-	1044	0.454	

# Required:

(i) Convert the above data into a matrix of transition probabilities.

(4 marks)

(ii) Estimate each firm's market share for 2015.

(4 marks)

(c) A firm has a linear demand function for its product. When the price of the product is Sh. 220, the quantity demanded is 40 units. When the price increases to Sh. 240 the quantity demanded becomes 30 units. In addition, the firm's marginal cost function is given by:

 $MC = 40q - 2q^2 + 2$ 

Fixed cost = Sh. 5million

where q = quantity demanded, MC = marginal cost (in Sh. million)

# Required:

(i) The level of output that maximises profits.

(3 marks)

(ii) The maximum profit.

(Imark)

(iii) The price of the product at the maximum profit.

(Imark)

(iv) The price elasticity of demand when the profit is at the maximum (interpret your result).

(3 marks) (Total: 20 marks)

# QUESTION TWO

(a) The City Theatre has four auditoriums namely C1, C2, C3 and C4. Each auditorium performs a different play at any given time. The performances start at different times to avoid long queues that would occur if all the auditoriums were to start performance at the same time. The theatre has a single ticket booth and a cashier who can maintain an average service rate of 280 patrons per hour. Arrivals are poisson distributed at an average of 210 patrons per hour. The services are assumed to follow an exponential distribution.

CA43, C143 & CP43 Pilot Paper Page 1 Out of 4

#### Required:

(i) The average number of patrons waiting in line to purchase the tickets. (2 marks)

(ii) The average time spent waiting in line to get to the ticket window. (2 marks)

(iii) The average time a patron spends in the system. (2 marks)

(iv) The percentage of time the cashier is busy. (2 marks)

(v) The probability that there are more than two people in the system. (2 marks)

(b) A marketing firm employs part-time marketers. The hours worked and the earnings of ten such marketers are as shown below:

Marketer	1	2	3	4	5	6	7	8	9	10
Hours worked (x)	20	30	48	39	28`	14	60	50	62	43
Earnings (Sh. "000") (y)	5.5	7.4	11.0	9,3	7.2	4.3	13.5	12.0	14.0	10.0

#### Required:

The least squares regression function relating the hours worked and earnings. Interpret your results. (6 marks)

(ii) The Spearman's rank correlation coefficient. Comment on your result. (4 marks)

(Total: 20 marks)

#### **OUESTION THREE**

(a) Lanex Company specialises in the production of an industrial dye. The firm manufacturers two types of dyes; light and dark. The selling price and the unit variable costs for the dyes are shown below:

	Selling price	Unit variable cost
Production	(Sh.) per litre	(Sh.) per litre
Light	13.00	9.00
Dark	16.00	10.00

Each litre of light dye requires 6 minutes of skilled labour and each litre of dark dye requires 12 minutes of skilled labour.

In a given day, there are 400 man hours of skilled labour available. There are also 100 grammes of an important blending chemical available each day, where each litre of light dye requires 0.05 grammes of the blending chemical and each litre of dark dye requires 0.02 grammes of the chemical.

The processing capacity at the plant is limited to 3,000 litres of dye per day.

The company is committed to supply a leading retailer with 5,000 litres of light dye and 2,500 litres of dark dye each working week (consisting of five days). In addition, there is an agreement with the unions that at least 2,000 litres should be produced each day.

Lanex company's management would like to determine the daily production volume for each of the two dyes that will maximise total contribution.

# Required:

(i) A linear programming model of the production problem facing Lanex company.

(2 marks)

(ii) Using the graphical approach, determine the optimum daily production plan and consequent contribution.

(8 marks)

(b) Brightshine Limited based in Nairobi manufactures a detergent. The firm is considering opening a new plant in Nakuru. The opening of a new plant will, however, depend on the demand for the detergent in Nakuru.

Information concerning the demand for the detergent is shown below:

H - High demand and leads to a profit of Sh.6,000,000 per year.

M - Moderate demand and leads to a profit of Sh.1,500,000 per year.

L - Low demand and leads to a loss of Sh.2,500,000 per year.

CA43, Cl43 & CP43 Pilot Paper Page 2 Out of 4

The chances of having high, moderate and low demand are assessed at 30%, 30% and 40% respectively by the firm's management.

A market research group could be employed to provide information on which market demand would be realised. Past experience with work in the same market with this group shows its information cannot be relied upon to be absolutely accurate.

The market research group classifies its results as either being good prospects (G) or poor prospects (P). The table below gives the extent of reliability of this market research group:

Market survey	Actual state of nature			
Result	Н	M	L	
G	0.7	0.6	0.2	
P	0.3	0.4	0.8	

The market research group would charge a fee of Sh.60,000 if it was hired.

# Required:

(i) The best course of action on the basis of prior information.

(2 marks)

(ii) The expected value of perfect information.

(2 marks)

(iii) Advise Brightshine Limited whether the market research should be conducted. Show your workings using a decision tree. (6 marks)

(Total: 20 marks)

# **QUESTION FOUR**

- (a) Distinguish between the following sets of terms:
  - (i) Zero-sum game and non-zero sum game.

(2 marks)

(ii) Pure strategy game and Mixed strategy game.

(2 marks)

(b) An engineering firm is tendering for a contract to supply a steel fabrication. The tasks have been analysed as follows:

Activity	Predecessor activity	Time (Days)
Α	and.	10
В	" My	12
С	A	10
D	Α	9
E	Α	13
F	A, B	17
G	C	12
Н	C, D	14
Į.	E	13
j	G, H	12
K	Н	10
L	H, I	14
M	H, I, F	13

# Required:

(i) A network diagram for the project.

(8 marks)

(ii) The critical path and the expected project duration.

(4 marks)

(iii) The time schedules for activities F, G and H.

(4 marks)

(Total: 20 marks)

CA43, Cl43 & CP43 Pilot Paper Page 3 Out of 4

# **QUESTION FIVE**

(a) A machine is composed of three components X, Y and Z. The probability that component X is in good working condition is  $^{7}/_{10}$ . If component X is in good working condition, the probability that component Y is in good working condition is  $^{3}/_{5}$ . If component X is not in good working condition, the probability that component Y is in good working condition is  $^{1}/_{5}$ . If components X and Y are in good working condition, the probability that component C is in good working condition is  $^{5}/_{6}$  otherwise, it is  $^{1}/_{10}$ .

The machine can only be effective when component Z is in good working condition.

Required:

(i) The probability that the machine is effective.

(2 marks)

(ii) The probability that only one component Y or Z is in good working condition.

(2 marks)

- (iii) The probability that component Y is in good working condition given that component Z is in good working condition. (2 marks)
- (b) The data below represent the sales made by Pengo Traders for a period of three years:

Year	Sales (Sh. "000,000") Quarter			
	1	2	3	4
2012	2.2	5	7.9	3.2
2013	2.9	5.2	8.2	3.8
2014	3.2	5.8	9.1	4.1

Required:

The centred moving average trend values.

(4 marks)

(ii) The seasonal additive indices.

(4 marks)

(iii) The deseasonalised time series.

(2 marks)

(c) Highlight the four components of a time series.

(4 marks)

(Total: 20 marks)
